A plan for executive training

Graduate points the way

Utilization of student activities to give institute necessary breadth.

To give the technological student an executive training is the need of the hour. His scientific course has been a problem to the industrial world. Many educational thinkers feel that the best way to develop a true executive is by training in the serving room as well as in the laboratory. It is due to this fact that there has been a movement which we have already referred to our possibilities for assimilation, or 'apprenticeship training,' and this movement is one which is growing rapidly.

The keynote of the movement is the idea that, in order to be of real use to the world, the industrial student must not only have a good scientific training, but must also have a good executive training. This is the idea behind the movement for the utilization of student activities, and it is the idea that the Institute of Technology has been striving to carry out.

The Institute has set up a number of committees to study the problem of the utilization of student activities, and the results of these studies have been most encouraging. The conclusion reached by the committees is that the utilization of student activities is an essential part of an adequate executive training program.

The Institute has also set up a number of courses in executive training, and these courses are proving to be very popular with the students. The courses are designed to give the students a good understanding of the principles of executive management, and they are also designed to give the students practical experience in the field of executive work.

The Institute is also working closely with the industrial world, and the results of this cooperation are very promising. The Institute has been able to place a number of its graduates in important executive positions, and these graduates are proving to be very successful in their work.

The Institute is also working with the government, and the results of this cooperation are also very promising. The Institute has been able to secure a number of grants from the government to carry out its work in executive training.

In conclusion, the Institute of Technology is making a real effort to give its students an adequate executive training. The results of this effort are very promising, and the Institute is confident that it will be able to carry out its work in executive training in the future.
