To buy a pair of shoes at
E. W. BURT & CO.
40 WEST STREET
Knickerbocker Shoes are worn by all Tech men. They make College Shoes.

MACLAURIN CHOSEN

(Copied from page 1.)

says, "It gives promise of a real school of legal history which may flourish and bear fruit, notwithstanding the general apathy of the profession toward everything not of obvious utility in practice."

In 1906 he was appointed Professor of Mathematics in Wellington, where the University of New Zealand is located, and soon afterward became a trustee of the university. In this position he took an active part in the organization of technological education in the country. In 1893 he was made Dean of the Faculty of Law in the University of New Zealand, which office he held for four years.

In the fall of 1907 he was invited to take the chair of Mathematics in Columbia University in New York City, which he has been previously occupied by Dr. Robert S. Woodward, now president of the Carnegie Institute of Washington. A year later he was placed in charge of the Department of Physics at Columbia University.

In 1898 the degree of Doctor of Science was conferred upon Professor Maclean by Cambridge University, in recognition of his researches in pure science; and he was again honored, in 1904, by that university, with the degree of Doctor of Laws, for his achievements in the study of law.

SOCIETY OF ARTS

(Continued from page 1.)

The description of the eruptions of Mount Etna, April 29 and June 15, of Mount Vesuvius, and Stromboli, April 27, were very vivid and entertaining. During the lecture, the microphone vol.

cosmic conditions, were well explained. The accuracy with which vol.

cosmic activity can now be predicted is shown by the fact that a slight erup.
tion of Mt. Etna was predicted some six weeks before its occurrence, although the outward appearances gave every indication of tranquility.

Professor Perrot offered several theo.

retries to his Theory of the Euphony. At a lake of belli.

ged mud, gas is emitted from vents near the base of the mountain. A tube is brought near the invisible vapor becomes apparent. This, he believes, is due to the accumulation and conglomeration of the particles. The last slide showed on the screen represented dynamic curves, showing correspondences of explosive motion with temper-stable phases.
