THE TECH
Published every Monday, Wednesday, and Friday spring and fall terms by the students of the Massachusetts Institute of Technology.

President's Statesman opinion

(Carried from page 1.)

ally developed into an extremely important institution. The equipment which sufficed in the past is entirely inadequate now.

If you look to the history of similar institutions in other countries you will find, I think, that in every case where an institution has outgrown its equipment a change to a new site and new buildings has been a turning point in its career. Such a change has often meant a comparatively obscure situation—or, at any rate, an unknown institution—into an important one.

I don't think any one who understands the situation would be in favor of moving very far away. How far away the Institution will have to go is a matter which is really dependent upon the amount of support it is able to secure. If it were possible to do what the Institute will be moved will be determined very largely, in my opinion, by the condition of its finances.

I think an Institute of Technology to do its best work, should be in or near the center of things. I should regret very much if the Institute were forced to move out into the country.

"Do you think a dormitory system would lead to the efficiency of the Institute?"

"I think there is a great deal to be done in that direction. The social side and sentiment that until its junior year of the dormitory systems, and all have its good points. The system in years in the old English universities is the ideal one, except—and that is a very important exception—that as managed in England it is expensive.

"The question of athletics is a very different one in a technological institute from what it is in a general university. I believe thoroughly in athletics for young men, with certain reservations.

"First, I believe that the young man must enter into athletics for the sake of his health. It is an important one.

"That is as far as I go. I don't approve of the extreme vigor of athletics in certain institutions, when it goes so far that a man thickens and dreams and talks of nothing but athletics.

"His Trust In the Future.

"Dr. Macfadden has the right hope of the new Institute of Technology in these words:

"The experience of most similar institutions in other parts of the country is that a bold policy, a courageous policy of trust in the future is the wise one.

"To advance rapidly, an institution must not be afraid of its own development.

"The Institute of Technology has everything it wanted in the shape of good traditions, distinguished and enthusiastic professors and alumni. I haven't any doubt that Massachusetts will see to it that, with these great assets, the Institute does not hesitate for lack of popular support."

The Act.

The question of athletics is a very different one in a technological institute from what it is in a general university. I believe thoroughly in athletics for young men, with certain reservations.

"First, I believe that the young man must enter into athletics for the sake of his health. That is as far as I go. I don't approve of the extreme vigor of athletics in certain institutions, when it goes so far that a man thickens and dreams and talks of nothing but athletics."

"If you look to the history of similar institutions in other countries you will find, I think, that in every case where an institution has outgrown its equipment a change to a new site and new buildings has been a turning point in its career. Such a change has often meant a comparatively obscure situation—or, at any rate, an unknown institution—into an important one.

"I don't think any one who understands the situation would be in favor of moving very far away. How far away the Institution will have to go is a matter which is really dependent upon the amount of support it is able to secure. If it were possible to do what the Institute will be moved will be determined very largely, in my opinion, by the condition of its finances.

"I think an Institute of Technology to do its best work, should be in or near the center of things. I should regret very much if the Institute were forced to move out into the country.

"Do you think a dormitory system would lead to the efficiency of the Institute?"

"I think there is a great deal to be done in that direction. The social side and sentiment that until its junior year of the dormitory systems, and all have their good points. The system in years in the old English universities is the ideal one, except—and that is a very important exception—that as managed in England it is expensive.

"The question of athletics is a very different one in a technological institute from what it is in a general university. I believe thoroughly in athletics for young men, with certain reservations.

"First, I believe that the young man must enter into athletics for the sake of his health. That is as far as I go. I don't approve of the extreme vigor of athletics in certain institutions, when it goes so far that a man thickens and dreams and talks of nothing but athletics."

"His Trust In the Future.

"Dr. Macfadden has the right hope of the new Institute of Technology in these words:

"The experience of most similar institutions in other parts of the country is that a bold policy, a courageous policy of trust in the future is the wise one. To advance rapidly, an institution must not be afraid of its own development. The Institute of Technology has everything it wanted in the shape of good traditions, distinguished and enthusiastic professors and alumni. I haven't any doubt that Massachusetts will see to it that, with these great assets, the Institute does not hesitate for lack of popular support."
