being upon the initiative and under the direction of Professor C. H. Peabody. In it, for the first time, the students are offered in many of the depart-
ments of the Institute.

A New Research Laboratory

Through the liberality of a member of the class of 1908, it has been possible to make definite provision for the import-
ant development and research work to the industrial applications of chemistry. By the facilities that this laboratory offers, the work of the Chemical Department, and in some instances, the work of other departments of the Institute, can be expanded and greatly accelerated. The funds that have been made available for the construction of this laboratory were entirely derived from a single source, as the result of an individual's initiative. This is, in my opinion, the best method of procedure, and the one that will be the most effective when successfully carried through. The laboratory is designed to be of a type that can be used for the instruction of small classes in the present and possibly in the future, when the number of students desiring instruction, will be greatly increased.

Development of the Buildings and Equipment of the Institute

Some important additions have been made during the past summer to our laboratory apparatus and equipment. Greatly needed space has been provided in the laboratory buildings, in the chemical laboratories, the machine shop, and in the chemistry building. This has been done in a manner that will make it possible to accommodate the increasing number of students, and at the same time, to provide for the expansion of our laboratory work. The laboratory has been designed with a view to the future, and it is expected that it will be able to accommodate a much larger number of students in the near future.

The present quarters of the Institute, as I have indicated, are inadequate to meet the demands of our present instruction. It is, however, my hope that we shall be able to establish a new building for the Chemistry Department in the near future, which will be adequately equipped with a laboratory, a classroom, and a lecture room.

Whereas a new and magnificent University has been provided for the use of the students of the Institute of Technology, and whereas the faculty and the students of the Institute have made many contributions to the success of the new building, it is only fitting that they should be recognized for their services. The University is the result of the combined efforts of the faculty and the students, and it is a fitting tribute to their services that they should be recognized for their contributions to the success of the institution. The University is a living organism, and it is impossible to imagine it without its students.

The Post-Space System

The admirable brain of our students, manifested not only in their work, but in their conduct and their deportment, has been a source of great pleasure to those of us who have been associated with them. It is, however, my hope that we shall be able to provide them with a more adequate and more efficient laboratory, which will enable them to carry on their work with greater facility and with greater success.

The Research Laboratory

The research laboratory is an important part of the Institute, and it is a source of great pride to those of us who have been associated with it. The research laboratory is designed to be a place where the students can carry on their work under the direction of the faculty, and where they can be given the opportunity to study under the guidance of the faculty. The research laboratory is a place where the students can be given the opportunity to carry on their work under the direction of the faculty, and where they can be given the opportunity to study under the guidance of the faculty. The research laboratory is a place where the students can be given the opportunity to carry on their work under the direction of the faculty, and where they can be given the opportunity to study under the guidance of the faculty. The research laboratory is a place where the students can be given the opportunity to carry on their work under the direction of the faculty, and where they can be given the opportunity to study under the guidance of the faculty.
