All communications regarding advertising should be addressed to the advertising manager, 33 Summer St., Boston.

Subscription rates: Domestic, $1.50 a year. Single copies, 3 cents. Second-class matter October 6, 1909. Published every Monday, Wednesday, and Friday. Subscriptions within the Boston Postal District and outside of United States must be paid in advance.

Printed by Old Colony Press, Boston.

Wednesday, February 17, 1909.

The Tech regrets to announce the resignation of J. Newell Stephenson 1909, and George C. Kennedy 1911, from the board of associate editors.

President Macklin will be kept hustling this week.

The 1909 Junior Prom Committee is to be congratulated upon the dispatch with which it has completed the arrangements for the coming event. The only essential now to make this year's Prom a success is the hearty support of the class. Men should sign up at once with the representative of their course.

The discussion of higher technical education by Dr. Machinie, which is so admirably translated in this issue by Professor Lowery, should be of much interest to the students of the Institute, which is united in the ideal—the Institute of Technology. The President-electcf skewers that to continue education and culture, as at the Institute, is the only wise method, but he adds a further point by arguing that if technology study is to be separated from culture, the scientific training should come first to prepare the student for a broader acceptance of the reports of culture.

This will be to many a comparatively new way of viewing the situation and will be properly handled by those who have cherished the idea that a scientific course at the Institution should be supplementary to the study of culture at one of the universities. The question reduces to one of the relative merits of a cultural preparation for scientific study and a scientific preparation for cultural study, and it would seem that quite as much, if not more, could be said in support of the latter—Dr. Machinie’s theory—over the older, more generally accepted plan.

COSMIC PHYSICS

History of Solar Systems to be Discussed by Prof. Lowery

The first of a series of six lectures on Cosmic Physics will be given in Hun- ton Hall Tuesday afternoon by Professor Percival Lowell, A.B., L.L.D., Assistant President of the Lowell Observatory of Flagstaff, Arizona. The lectures will be held weekly from four to five and it is especially pleasant for second, third, and fourth year men. The main purpose of the course is to give a survey of the progress made toward the theory of the physical sciences, and to awaken interest and aruse imagination and thought in the large problems which the subject involves.

STENOGRAPHER'S AT UNION

(Continued from page 1.)

exams, written are advised to place their orders for thesis work as early as possible to avoid getting left.

The office will be open from 8.00 to 10.00 a.m., and from 11.40 a.m. to 3.00 p.m. Mail orders should be addressed to the office of the Institute Committee, 5 Trinity Place. Notice will be given in the Tech and on the various billboards as to the exact date of opening, which will be within a few days.

The many friends of Frederick J. Evans, 1911, will be grieved to hear of his recent bereavement in the death of his father. The young man’s father, who was a stationary engineer, in some unaccountable manner became entangled in the fly-wheel of a large engine last Monday, and he was horribly mangled. He was removed to his home, where he died late in the afternoon.

The members of the Sophomore class, collecting a fund to send flowers to their beloved classmen and all desirous of contributing are asked to communi- cate with J. E. Emsley 1911, either in per- son or through the Cage.
