NEW COUNTRY MEN NEEDED

Tech in Danger of Losing Prestige Unless More Activity Is Shown

Technology is this year a member of the L.C.A.A.A.A., and in view of the showing made in the cross-country championships at Princeton last fall, we are looked upon as a factor in this year's race to be reckoned with next to Cornell. In spite of this fact, men are not showing up for cross-country in numbers which will give us a team of collegiate contests.

The work in cross-country is planned carefully with regard to the demands which the Institute work makes upon the man.

The training consists of weekly hour and round trains on Saturday or Sunday, a score or so in the country surrounding Boston, together with short runs from the Gym, at four and five o'clock on week days afternoons, and a short score at the Field. No man's work need suffer—indeed, we have physical exercises after classes, over each of which an instructor is set as chief. The practice of maximal efficiency, and the other aspects of the first exercise are being done at the Field. The work is planned so that the portion of the class not at rail work is doing advanced surveying. In this course there will be exercises during the first part in studio surveys, later the height of various structures will be ascertained, and the work will be determined by barometric observations. An opportunity will be given also in drawing maps from topographic surveys.

In another branch of the civil engineering, fields work will begin shortly, namely in the Geology Department. Last year some of the most interesting, as well as profitable work, were made to the points around Boston where the geologic formations are most visible.

Some of such trips in the far that in the past have proven very profitable in their instructive value, and most excellent in the opportunity they afford the student in bringing along from their cruise, students ought to prove as much of value this year as last.

EXCHANGES

The faculty of Purdue University has adopted a new rule which states that the senior class, after having completed the two first years of the four years' course, may be transferred to another university in the United States, with the approval of the Purdue faculty. The senior class of Purdue will be permitted to transfer to Brown University, and the junior class of Brown University will be permitted to transfer to Purdue University.

CIVIL ENGINEERING SOCIETY DINNER

The Civil Engineering Society will hold its first dinner on Thursday, October 8th, at 6:30 P.M., in the Union, Pri- by the prompt attendance of members of the society, and the excellent financial condition of the society, it is hoped that the society will continue to flourish.

CO-OP SOCIETY IN EXCELLENT CONDITION

Money on Hand and Good Prospects For Coming Year

The Co-operative Society is in excellent financial condition and expects a prosperous season. A large number of sales have been made and the society has money in the bank.

President Beyer 1912, said that about 300 tickets were sold at the Union, Pri- by the prompt attendance of members of the society, and the excellent financial condition of the society, it is hoped that the society will continue to flourish.
