Recent investigators among the freshness class show that the majority of the 1913 men are readers of The Tech. While not regular subscribers many of them buy the paper regularly from the boys selling them in Rogers Corridor, Walker Building, and elsewhere.

Interest was shown principally in intercollegiate news, and Hornet's Nest, the notices in the back and totes doing around the Institute.

A number of men interviewed by a Tech reporter yesterday on the topic expressed themselves as follows:

Stanley Baxter 1913, "The Tech is considered a very fine-up to-date college paper. It contains the Institute's Nest and the cartoon department, all essential to the student life."

R. S. Smith, says, "I buy it daily. It is the only way to keep up on the various college news and the notices."

M. M. Macrury, says, "I get The Tech principally to read the athletic news. It is the only way I can keep up with the latest happenings on this back interest too."

E. L. Wadsworth 1913, "It is very valuable to me daily. Principally for news, the intercollegiate news is also of interest."

A. A. Sommers 1913, "I buy The Tech regularly, and enjoy reading it thoroughly. The general college and athletic news is most interesting to me."

D. A. Fales 1913, "The Tech could be improved if more sporting news was printed. At present the advertisements are so interesting as the news."

L. Housh says, "I like The Tech a deal. The Hornet's Nest and the notices are all right.

G. W. Reed 1913, thinks it is a very good paper, but "at times some of the hot air printed is a bit too much."

E. M. MacDonald 1913, "The Tech would be better with more articles with a little touch of humor in them such as that one on "A Fair Damsel Aids.""

T. W. Jones 1913, says that new experiments that should be corrected before the paper comes out."

E. B. Brooks 1913, thinks that "there are too many cold facts in the front pages, and too much upper class news. Not enough of our class activities."

T. F. Rich 1899, when asked, "all right but shoot some more finger in the H. Make it more than a dead one."

E. C. Hart 1913, since the previous year, and to read should be of a higher order. Some of the stuff printed on the June page should be substituted by items such as that on "A Fair Damsel Aids."

T. L. Mather 1913, says, "It's all a fair paper with some intercollegiate and freshman news. But, too much padding in it anyway."

NEW CHEMISTRY BOOK

Dr. Arthur A. Blanchard, Instructor in Chemistry, is now working on a Second Edition of his "Inorganic Chemistry," which he hopes will be ready for the fall term. This edition will be the second of the old processes have been improved in a more up-to-date manner. The subject is treated in a very readable, clear manner, well suited for the student. The book will be published in the fall.
