Curtis And Parsons Turbines Now Ready For Operations
The two forms of turbine generators which the Institute now possesses form a complete set for all tests on this type of machinery. The Curtis turbine which was installed during the vacation is a 150 kilowatt machine running at 2000 R. P. M. It is a two stage horizontal turbine, taking steam at 145 lbs. pressure and direct connected to a 320 volt generator. The set will be ready for work as soon as the cable which is now on the way will arrive. This addition to the power plant will make it possible to furnish all the power required with one-half of the installed machinery, and a break down of considerable magnitude would have to be made to incapacitate the plant completely.

The installation of the Parsons turbine has been completed and a preliminary run on this set was made last Friday. The generators were operated at full load, and for a short time, at a slight overload. In each case the machinery behaved satisfactorily. Two Course II men are planning to run a load on this set during the present term, and the classes is eager to try out this department. The liberal of the Westerning of the General Electric Co. made it possible to install both of these generators at less than the commercial cost of the machinery.

MUSICAL CLUB TRIP
(Continued from page 1.)
...Quadrille... from Rochester in the formation of the M. I. T. Alumni Association, a new organization devoted to the forwarding of the interests of Technology formed for the immediate purpose of supporting the Musical Clubs Concert. Moreover, the appearance of the club, not a bad advertisement for the Institute, as the concerts were all of high quality, and it was agreed that the clubs compared favorably with those of Boston and other colleges which had presented them.

Finally, a result was accomplished toward dispelling the minds of the communities visited of the false and harmful notions that Tech has no student social life and is no place for any but the morally degenerate. The trip was so entirely successful, it seems highly probable that it will be made annually next year, as the route may be changed. The greatest credit is due to President T. W. Warner, through whose enthusiasm and zeal the trip was made possible. At the first plan, and to whose unaltering energy the success of completion was given in great measure due.

The tour was indebted to A. Mac- kahan for the kind loan of flags and pennants, to the Alumni Association for the use of banners and the moving van, and to the drama, for the hearty co-operation, without which the trip could undoubtedly have been a failure.

SHOW REHEARSALS
(Continued from page 1.)
...rehearsals... the final stagings of the Show, and from now on the Alumni Association was consumed with the men in the Show. It has charge of all rehearsals, of the members of the cast and chorus during the performances, and of all special trips that may be made to Northampton, Holden, etc. The principal requirements for the performances are therefore the ability to manage men and to put in effective work. The work of this department starts with the first final rehearsal candidates to narrow and ends with the last performance, which large to be given the twentieth of April. The shows were received in each city, and as it seems highly probable that it will be made annually next year, as the route may be changed. The greatest credit is due to President T. W. Warner, through whose enthusiasm and zeal the trip was made possible. At the first plan, and to whose unaltering energy the success of completion was given in great measure due.

The tour was indebted to A. Mackahan for the kind loan of flags and pennants, to the Alumni Association for the use of banners and the moving van, and to the drama, for the hearty co-operation, without which the trip could undoubtedly have been a failure.
