Eighteen libraries containing 86,554 volumes and 23,819 pamphlets, and 36,554 bound periodicals, which represent the total investment of $182,000, are at the disposal of the students.

The General Library contains an important collection of books owned by the Institute together with Bibliographical dictionaries which list, in book and magazine articles on all important subjects, whatever written in English, French, or German. This makes the Institute library more complete than those of any other institution of this kind in the country.

The greater part of the books are distributed to the departmental libraries, as well as to the various engineering and scientific periodicals. In the case of periodicals which appear but once a year, such as the "Engineering Magazine," several copies are taken and distributed to the departmental libraries of the names of those publications. This is also true of a number of important books. An advantage of this system is that if one of these is out, the student may consult the book in the General Library and find where the other copy is located.

In looking for a book, it is desirable to know the name of the author, the title, and the departmental library to which it is indexed. For this purpose an index card is kept for every book in the General Library. This card contains the name of the Library, the number of the card in the Card Catalogue, the name of the Library which contains the book, the shelf number of the book, and a reference to the name of the author, title, and departmental library to which it is indexed. In any case look for the name of the author, title, and departmental library to which it is indexed.

In order to make the students familiar with the Card Catalogue, the name of the Library in which the book is located, and the number of the card in the Card Catalogue, all books are stamped upon the upper left hand corner of the card. The books are arranged on the shelves according to the numerical order in which the cards are placed, the book with the card in the Card Catalogue and catalogue number nearest to the wall being highest on the shelf and the book upon the upper left hand corner of the card being lowest. This number indicates the position of the book in the Card Catalogue, the name of the Library in which the book is located, and the number of the card in the Card Catalogue.

This is the only library whose use is restricted. The Library of History and Economics is on 4th Floor and contains 4,000 volumes and services daily.

The Mining Engineering Library in Boggs contains over 5,000 volumes and receives the American Institute of Mining Engineers Journal.

The Chemical, Electrical, Mechanical, and Naval Arch libraries contain over 5,000 volumes and receives the American Institute of Chemical, Electrical, Mechanical, and Naval Arch libraries.

There are no reference books in the Card Catalogue. At the right of the shelf are found the Bibliographical dictionaries which may be used as a "counselor" in cases of difficulty. From these dictionaries, it is possible to find out everything which has been published in print respecting the subject, both in book form and articles in periodicals.

The Mining Engineering Library in Boggs contains over 5,000 volumes and receives the American Institute of Mining Engineers Journal.

The Chemical, Electrical, Mechanical, and Naval Arch libraries contain over 5,000 volumes and receives the American Institute of Chemical, Electrical, Mechanical, and Naval Arch libraries.

The Mining Engineering Library in Boggs contains over 5,000 volumes and receives the American Institute of Mining Engineers Journal.
