BOSTON, MASS., MARCH 22, 1910.

Book-Night saw the culmination of a spirit that has very unfortunately been growing up around the Union—to get as near the improper as possible without getting exactly on the side of indecency. This is the case of a few, and it seems to be the highest intellectual talent in that of being clever and witty. Fortunately the one-third of the Institute body which was present last Friday night unreservedly showed the disapproval of this doubtful style. It is up to the few dealers in this low way who take the hint. Remember that everything of this nature reflects not only on the character of the individual but actually places a taint on the character of the whole Institute, past, present, and future. Remember not only our contemporaries but also our predecessors who have by their great work after graduation placed the name of the Institute as it is in our province to undo what they have done?

With the inspection trip to Lawrence the Electrical Engineering Department takes an important step towards a more complete development of their graduates. Benefits to be derived from a town of industrial plants will be greatly increased by the wise selection of older men and the better opportunities offered these will be exhibited as an official part of the Institute.

The Electrical Engineering society has arranged many excellent trips. However, it is not to be denied that the success of any excursion, as an instructor familiar with the industry, will depend greatly on the underwriting. Is the trip of the professional society, the superficial knowledge of the more eminent leaders is too evident.

On the surface many institutions present really the same feature. It is the opportunity of the instructor in those trips to show how this or that problem was met, what this machine does or how the product is handled. There have been many excursions in the past on which the man looked and wondered. They were kindly received, yet their guide was conventional enough with his standpoint was often the things they wanted. He knew well what they thought the most interesting and passed them the compliments of suggesting they could follow him about lines in which they had had no training.

Washington, D. C.

Washington, March 22.—The census cotton reports shows the crop of 1911 to be 10,363,260 bales, counting round as 7,437,000 bales. This is compared with 13,432,131 for 1908. Cotton estimates are 1,132,000 as remaining to be ginned and included in the statistics for 1909 is 6,468 bales.

London, March 22.—The tariff negotiations between the United States and Canada were the subject of questions in the House of Commons yesterday. Certain members desiring to know whether the government proposed to resist Canada, "in view of the American threats to penalise Canadian interests and the danger of a tariff war." Premier Asquith stated that the Canadian government had been made fully aware but the good offices of the British government and Ambassador Bryce were at their disposal, but he declined to discuss the matter further in view of the negotiations that were pending.
