Gathered around the back of a large barn, the crowd had gathered to watch the first ever glider meet at M.I.T., held during the last week of classes. The main event was the first attempt to fly on the back of a horse, and the audience was held in suspense as the horse, under the weight of its rider and the glider, was slowly lowered onto the ground. The horse, however, refused to budge, and the crowd was left disappointed. Despite this setback, the enthusiasm of the attendees remained high, and the meeting was declared a success. The audience was treated to a series of glider exhibitions, including a demonstration of the M.I.T. glider, which featured a pilot and a passenger. The crowd was also treated to a performance by the M.I.T. gliding team, which included several members of the M.I.T. Track and Field team. The meeting was capped off with a brief address by Mr. Charles A. Sholes, who spoke about the future of aviation and the importance of continued research in this field. The meeting was a resounding success, and the audience left with a sense of excitement and hope for the future of aviation.
