GENERAL NEWS

TELEGRAPH NEWS OF THE MORNING.

WEATHER REPORT.

Washington, April 3—Forecast for New England: Monday warmer; light to moderate north winds, becoming variable.

New York—Mrs. Russell Sage has made State-wide plans to thwart the loan sharks who fatten upon the necessities of the poor. Following her return from her trip in the West, the announcement was made that the widow of the famous money lender of Wall Street had decided to turn her millions into loans to the poor.

Combining the principles of the bi-plane, the parachute and the aero-planes into one machine, two Lynn machinists, Ernest Begin and George H. Paris, both of 70A Broad St., believe they have solved the question of the ideal flying machine. The idea embodied in their first model was derived and copied after the actions of the sea gull.

The flying machine on which they base their hopes of carrying off a number of the prizes offered for the aero contest to be held in Boston next October, is a heavier than air machine and will weigh, with 50 horse-power motor and two men, about 750 pounds. It is 26 feet long and from tip to tip of its expanded wings will measure 24 feet.

The huge wings of white canvass are propelled by a motor, which gives it the motion of a flying bird flapping its wings at the rate of 50 times a minute. In the canvass are about 50 small automatic air valves which open when the wings are ascending and close on the descent, which will relieve the pressure on the up stroke and increase it on the downward stroke.

That the popular conception of the Darwinian theory of the descent of man is imperfect and too hastily assumed in its entirety is the very latest opinion set forth by Professor Frederic Ward Putnam and Dr. Morris Richardson, who point out that as far back as primitive man can be traced he differs in structure so little from modern man that the differences are merely comparative. With the earliest remains, found at a period variously estimated to be from 500,000 to 1,000,000 years ago, the relationship of man to the apes or to a common ancestor with the apes is thus thrown so far into the past that a new light is cast on the actual antiquity of man as a distinct creature differing from all the lower orders.

By achieving, after five days of practice, an official score which many veteran sharpshooters have never yet been able to attain, John H. Fitzgerald of New Hampshire, has just made a record which expert marksmen everywhere now believe will eventually make this youth the champion shot of the world.

Shooting again 220 crack shots specially selected from the 8,000 men who make up the membership of the National Rifle Association, Fitzgerald, a young Goff's Falls storekeeper, after five days' practice with a new rifle, has performed the remarkable feat of capturing fourth place against the best men in America.

FOREIGN.

San Sebastian, Spain, April 3—In sight of thousands, M. LeBlond, the famous French aviator, was killed here yesterday, while making an exhibition flight.

He was circling the Royal Palace of Miremar, when the mechanism of his aeroplane broke and the machine fell on the rocks of the seashore, making nearly a 100 foot drop. LeBlond was using a bi-plane of the Voise type.

Naples, April 3—All the way from the wilds of the White Nile to the beautiful Bay of Naples, Mr. Roosevelt's travelling companions have observed in him a steadily increasing interest in American affairs. Upon his arrival here a number of incidents combined to press home upon him the delicacy of the position he will be in when he reaches America.

Rome, April 3—The audience which it was believed ex-President Roosevelt would have with the Pope on Tuesday next will not occur, owing to conditions which the Vatican has imposed, and which Mr. Roosevelt refuses to accept.
