TEXTEXH EXHIBITION

Will Be Held At Mechanics Building Next Week.

Of special interest to Institute men is the ongoing annual convention and exhibition of the Textile Exhibitors' Association, to be held in Mechanics Building all next week. The exhibition will provide one of the finest and most complete shows of textiles machined and finished products ever held in New England.

As prospective engineers, Textile men should find particular interest in the new department which has been added by Manager Chester I. Richardson, of the Textile Exhibitors' Association. This new department will be devoted entirely to cement and concrete concerns in the country and has booked space in this department.

The exhibition will be held at the same time as the annual convention of the National Association of Cotton Manufacturers, the work of the latter convention being in affiliation with the Textile Exhibitors' Association. The exhibition has been most unusual in securing as guests a number of well-known members of the Institute, as well as a number of other prominent educational and engineering circles.

LAST CALL FOR BOOKS

It is imperative that all men who have signed up for copies of Textile Engineering as well as possible, for Monday at 4 P.M. the order of the committee will be filled in the order of application. Then it will be a case of "first come first served" for those who have not ordered the textbook. The order for books is now being held daily by members of the business staff.

The offices for the reduction of book orders are as follows: Monday, 8:30-9:00 A.M.; Tuesday, 1:30-4:30 P.M.; Wednesday, 10:00-12:00 P.M.; Thursday, 1:30-4:30 P.M.; and Friday, 1:30-4:30 P.M.

TECH BASEBALL

An article on "The Evolution of College Baseball," written by Mr. H. R. Pritchett, appeared in the April number of the Technical Magazine. Mr. Pritchett was president of the Institute from 1890 to 1913, and what he has written is a subject of college sports in general and baseball in particular, is extraordinarily interesting.

He has interested himself in college sports during the last thirty years, not only as an endorser but also as a critic. He is strongly in favor of organized college athletics and regrets that any one should discourage them. He has not entered into any sport with that sort and enthusiasm that has existed many years ago, but to get their greatest joy and pleasure. He is admirably well fitted to judge the merits of college baseball for he says himself, and I accepted a position on a professional team I sometimes imagine I might have reached real success.

Mr. Pritchett speaks in the warmest terms of the splendid qualities of the baseball. If I have not entered into any sport with that sort and enthusiasm that has existed many years ago, but to get their greatest joy and pleasure. He is admirably well fitted to judge the merits of college baseball for he says himself, and I accepted a position on a professional team I sometimes imagine I might have reached real success.
