BOSTON, MASS., MAY 11, 1910.

The Institute Committee has at last obtained the opportunity that will show the value of generalized student control of those matters which directly influence student affairs. If they meet with the situation successfully the first mile stone of a better student body will be reached.

This development has been gradual but none the less worthy because it has been slow, and not forced, but rather a natural development it will be much more permanent.

There are still many points to be charged up; but this very fact prevents its becoming a stale "cherished" institution. The membership of the Institute Committee may be altered to make it more representative; other groups may be given more direct representation, but because of its very broad character the committee can work out its own development upward unhindered by the interpretation of words in a constitution.

Despite any of the minor faults with the Institute Committee as it stands today the germ of good government is there and those who have worked so unselfishly to attain this goal may rest assured that their efforts have not been in vain; and when they look back after graduation they will see the results of their work bearing fruit in a better Technology spirit.

The Cosmopolitan Club has finished the year with no evident intentions of being a failing institution. Here's hoping the newly elected officers will be

able to advance the club to a place it certainly deserves among the best of our societies. Mr. Sandstein as president brings in the experiences of other colleges as well as countries which should enable him to accomplish a great work in the advancement of the club.

GENERAL NEWS

TELEGRAPH NEWS OF THE MORNING.

WEATHER REPORT.

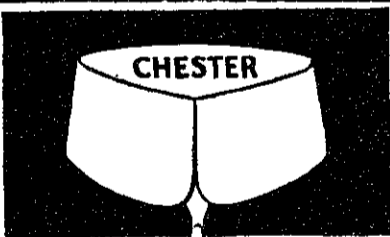

Forecast for Boston and Vicinity.—Fair tonight and Wednesday. Moderate westerly winds.

Boston, May 11.—Since the Commonwealth of Massachusetts established a nautical training school, eighteen years ago, there never has been a period when the State offered such opportunities for its youths to acquire seafaring, electrical and engineering knowledge as will be the case in the forthcoming annual cruise of the schoolship Ranger. Not only will the cadets have the advantage of gaining their knowledge this summer aboard a vessel far and away more modern in its equipment than was the old training ship Enterprise, but they will have opportunities which were lost even to those cadets who were on board when the Ranger went abroad last summer on her first cruise in the service, and who since have been graduated; for this year the Ranger is to have wireless telegraphy, with daily instruction in its intricacies, also the submarine signal, and thorough instruction for the cadets in that scientific device for safeguarding navigation.

Boston, May 11.—Charles S. Mellen, president of the New Haven railroad system, appearing before the committee on railroads at the State House yesterday, practically defied the Legislature to investigate the New Haven road. He declared he would furnish the committee certain information which they desired concerning his railroad as a courtesy, but that he would entertain no demand which might be made asking him to give information relative to his bill validating the illegal securities of the New Haven.

FOWNES GLOVES

are not cheapest, but they're least expensive.
