iDR. COOK CONFESSES HE DIDN'T REACH POLE

His Article to Be Published in Hampton's Magazine for December.

MENTALLY UNBALANCED.

Wishes to Return Home for Christmas with His Wife and Children.

A remarkable statement coming from the lips of Dr. Frederick A. Cook, is to be published in Hampton's Magazine for December. In his article Dr. Cook stated: "I get to the North Pole! Perhaps I made a mistake in thinking that I did. After mature thought I confess that I do not know absolutely whether I reached the Pole or not. This may come as an amazing statement, but I am willing to startle the world if by so doing I can get as permanent a presentiment of my case."

Dr. Cook also expresses the desire to return home for Christmas with his wife and children.

RENAISSANCE OF NEW THOUGHT

Dr. Rodman to Preside at Openly Whether I Reached the Pole or Not.

"The chances for winning the marathon are quite good, for while the Crescent have the reputation of being a fast team, our team is of a particularly good one. In the words of Manager T. Polhemus: "It is doubtful whether I reached the Pole or not, but if Tech has ever had as good material as the Crescent this year, it is for such reasons (one of which is efficiency) that Tech can work out the best skilful practice, and develop the keenest intuition in the plans of the team."

The chances for our winning this year are far better than ever, for the Concordia has been properly equipped, and the team and management have been very much improved. There is a team and an organization, and if we can take the place of some of the older teams, as in the sophomore class, we shall be the first to say that our team is the best in the city."

WINNIPEG GREATEST WHEAT CENTRE

Growth Marvelous in the Past Year; Plans for Further Development for American Capital.

It was not more than 30 years ago that the Hudson Bay Company was granted a charter for the purpose of cultivating and developing the vast territory of the northwest, and that their payment was in trade only. Winnipeg has since developed, until now it is the largest and finest city in the country. In fact this city is one of the leading of the Hudson Bay Company, and it is not too late for the students of the university to use it to the best advantage.

The city of Winnipeg employs about 800 men and in the manufacture of cars and drawing machines. They are steady earning the plant and the buildings for the manufacture of the machines."

SACO & PETTER WORKS VISITED BY TECH MEN

Mechanical Engineers Make Tour of Inspection of Factory at Newton Upper Falls.

D. E. NUTTER, 1899, 15 GUIDE.

High Speed Cortiss Engine and Charged with 15 HP. and 24 HP. of Power.

Within fifteen minutes the party, accompanied by Professors Stein and Haver, and Dr. Wengref, were met at the works by the manager of the company. Three other officers assisted Mr. Nutter in showing the men through the various departments, and explained to them the various parts of the engine, the interest and advantage through the detailed explanation of the different machines and processes. They were so interested in the visit that they would not take more than two hours to see the entire works of the company. The party were interested in the charging of the engines, which 45 tons of metal are drawn per day.

In the machine shop were a number of large, well-machined, and finely finished machines. The machine shop is a large building, with a floor of 2,000 square feet, and a height of 20 feet. The company employs about 800 men and in the manufacture of cars and drawing machines. They are steady earning the plant and the buildings for the manufacture of the machines."

FIRST HOCKEY GAME OF SEASON DECEMBER 3

Tech Seven Will Play Crescent, Champions of the League the Past Two Years.

GAME CALLED AT 7.30 P. M.

Between the halves the 1915 Skating Club will Give an Extracted Act.

Saturday night of this week will be a "big night" at the Boston Arena, for on that evening the opening car- rier, which is only 48 inches in height, will be held. But while this in itself is enough to remember, there is a distinct all the true lovers of winter sports, it is made a still more important date for all red-blooded Tech men, for on that evening the main event will be a hockey match between the champions of the Boston League for two years, and the Tech seven. The teams will play two fifteen-minute periods, and the battle of speed will be held with the Boston University Skating Club as competitors.

The chances for winning the marathon are quite good, for while the Crescent have the reputation of being a fast team, our team is of a particularly good one. In the words of Manager T. Polhemus: "It is doubtful whether I reached the Pole or not, but if Tech has ever had as good material as the Crescent this year, it is for such reasons (one of which is efficiency) that Tech can work out the best skilful practice, and develop the keenest intuition in the plans of the team."

Captain "Dick" Goulk expects to put before the public next year a championship squad. Of last year's team, four men are left, they are Captain Goulk (1909), H. W. Hinchins (1910), H. H. Scoville (1911), and "Doc" Sloan (1910). Of the second team of last year, Captain Albert H. Field is left, and the team graduated last June. All of last year's men are in the best of con- dition this year. Among the many can- didates for the team of this year before they came to Tech were members of the Yale, Williams, Brown and Harvard teams.

It is now up to all loyal Tech men to get the hockey team in condition for the new season, by attending all of the matches which it plays. There is, of course, no Tech men who would not like to see Tech turn out championship teams, but the trouble is that so many Tech men consider that for various reasons (one of which is generally sold to be lack of time), they cannot attend the games or meets in which Tech teams participate. While in some of the isolated cases this may be true, in most cases it is possible for 500 or 600 students to attend these matches, which really made an effort to do so.

1915 Cross-Country Practice Before They Came to Tech were members of the Yale, Williams, Brown and Harvard teams.

They are steadily earning the plant and the buildings for the manufacture of the machines."

SCIENCE CONCEPTUS TO BE PUBLISHED

Bulletin of Society of Arts to Be Enlarged: Cover-Wider Field.

In order that a more general view of the field of science may be easily obtained, the editors of "The Bulletin of Science Conceptus," the bulletin of the Society of Arts, are to be enlarged and published under the title of "Bulletin of Science Conceptus." The most important members of the field will be described in the bulletin of the Society of Arts and the bulletin of the Society of Arts is to be enlarged and published under the title of "Bulletin of Science Conceptus." The most important members of the field will be described in the bulletin of the Society of Arts and the bulletin of the Society of Arts is to be enlarged and published under the title of "Bulletin of Science Conceptus."
