LATEST DEVELOPMENT IN MOVING PICTURES

Kinetoscope Process to Be Demonstrated Before Appalachians.

There will be a meeting of the Appalachian Mountain Club in Huntington Hall on Friday, December 16th, at 8 o'clock, for the demonstration of the Kinetoscope moving pictures in the colors of nature. Mr. C. F. Willard, of the class of 1891, formerly an illustrator at the lantern, has written that this exhibition will be of remarkable interest, and the students here will undoubtedly find it so.

The inventors of this process were Charles Urban and George A. Symch of England, their process consisting of reducing the number of ray filters from three to two, these being red and green. The pictures are taken with the ordinary moving picture machine, but twice as fast as with the black and white system. The film used is much more sensitive than those used in ordinary work, a special agent being employed to make the negative extremely sensitive. The effect of this process is to give a most life-like color to the pictures.

PROVIDENCE ALUMNI PLAN TECH LUNCHEONS

Invitations Have Been Sent Out Asking Men to Meet On Thursdays.

The following interesting announcement reached The Tech office yesterday. It serves to show some college spirit among Tech alumni:

EVEN THURSDAY M. I. T. men will lunch at Brucker's Hotel, 317 Washington street, at 3 P. M. on each Thursday.

You Lunch on Thursday?

Then why not join us and get waked up?

Lunch served promptly. Cost, 50 cents, to be paid at the table.

In order that the committee may make their arrangements you are requested to mail the enclosed postal promptly, stating whether you will be present at the first gathering, Thursday, December 15. After the first lunch no notice will be sent—just drop in. The secretary will answer any questions you may ask in regard to the pictures. Telephone number, Union 1920.

THE TECH, BOSTON, MASS., DECEMBER 15, 1910.
