BASKETBALL TEAMS WIN BOTH GAMES

Large and Enthusiastic Crowd of Spectators Witness the Opening Games.

VARSITY SCORE: 46 TO 35

Technology defeated Boston College last night before a very enthusiastic crowd of Tech men, Boston College men and outsiders. The game played a clean, fast game all through and seemed to have it in the college team in every way. The follows turned out in a way that spoke very well for their interest in the game, and they more than out-cheered the snappy runners from the college. Crocker scored first and immediately followed by Parker, then in a mix-up with Parker, Murphy was hurt and下去. The game then settled down and forth with a score now for Tech, and more than that for Boston College. The first of the first half found a score of 22 to 21 for Tech, the spectators were so vocal. The college held this lead by 21 for Tech. The spectators were so vocal.

Referee--W. B. Hargraves.

Score: Technology, 46; Boston College, 35.

BASKETBALL TEAMS

MANUFACTURE OF SUGAR IN PORTO RICO

Mr. G. W. Rolfe, Instructor in Sugar Analysis, Speaks to Chemical Society.

MANY SLIDES SHOWN.

Geographical Feature of the Island and Life of Native Described.

A most interesting talk was delivered before the Chemical Society last night by Mr. George W. Rolfe. Mr. Rolfe has been many connected with the practical side of the manufacture of sugar, and lived for some years on the Island of Porto Rico. He took for his subject "Sugars," and with the aid of slides showed and explained the different operations which occur from the time the sugar cane is first planted up to the time when it is shipped away to the refineries.

Among his slides were many which show the plant stages through the various geographical features of the Island. Magnificent military road, some eighty miles in length, running through the island and often winds along the mountain sides, where it is bordered on both sides by large sugar plantations.

Before the Spanish-American war, Porto Rico was the chief supplier of sugar from Porto Rico, and there was a great demand for it by the people of South America, and even from Europe. One of the sugar industries is sugar juice which gives the chief export of Porto Rico.

In the days of the Spanish regime most of the larger sugar plantations utilized their own mills, but now this is not the general practice. Instead the planters ship their cane to central sugar mills which are equipped with modern machinery and which handle many thousands of tons of cane per day.

The natives of the island are very dark-skinned negroes, and with many habits similar to those of the same race in the States. Perhaps it may be interesting to know that the habit of smoking is more prevalent among the greater number of people as a custom among the women.

After the before completed rededication ceremonies were served to the society and introduced an appreciation of Mr. Rolfe's talk quite vigorously.

OFFICERS ANNONCED FOR CORPS OF CADETS

All Officers Except Corporate Members Have Been Appointed.

New Drill Hours.

The announcements to the staff of officers of the Corps of Cadets, which have just been announced, are:

To be Adjutant, E. H. Wallace.
