ANNUAL PLANT TEST
TO CONCLUDE TODAY

Work Done By Students and Computations Made Form Data Collected.

Much interest is being shown by the Seniors in Courses II, VI, X, and XIII in the annual plant test of the Institute, which they are now carrying on. In the work, all the feed water, coal, ashes, and condensed steam are carefully weighed; and the temperature of the flue gas, feed water, and condenser water is registered by students assigned to the task. While this data is being obtained, other students take indicator cards from the engines and planimeter them in order to obtain a confidence which will be of immense value in the future.

Steps are being taken by the Faculty at Columbia to organize a student forum for the expression of undergraduate sentiment.

(Continued from Page 3.) The agricultural arts and sciences to produce crops at the rate of increase faster than either the normal rate of increase of population, or the normal rate of increase of population, or the possible rate of increase of population, have been demonstrated times innumerable by the Department of Agriculture, by the experiment stations, and by the intelligent farmers all over the country.
