SOCIETY OF ARTS
LECTURE TO-MORROW
Illustrated Lecture on Physical Basis of Heredity
BY PROF. WILSON OF COLUMBIA
Study of Phenomena of Cell Life and Life of more Complex Organisms.

On Friday evening, March third, at eight o'clock, in Huntington Hall, Professor Edmund Beecher Wilson, a life-long friend and colleague of Professor William T. Sedgwick, and co-author with him of "Elements of Biology," will deliver a vividly illustrated lecture on "The Physical Basis of Heredity." Professor Wilson, one of the foremost if not the very first of biologists of the United States to-day, is more particularly a cytologist,—i.e., one who studies the phenomena of cell life and individual cells. In his specialty he is brought face to face with the fundamental phenomena of life, both cellular and in the form of complex organisms, and especially with cell multiplication and reproduction. Professor Wilson's volume entitled "The Cell in Development and Inheritance," which appeared in 1905 and has been translated into several Continental European languages.

Of late years, Professor Wilson has given special attention to problems of heredity and the general and control of sex, and in his lecture, Friday evening, he is likely to deal in a novel and original way with the most fundamental of all biological subjects.

Professor Wilson is also famous not only as an original worker, but for a manner of unusual magnetism and charm. He is rightly considered one of the best of living teachers of Biology, and some of the most prominent biologists of the day have been trained in his laboratory and in contact with his stimulating personality. He is very rarely heard in public, and his appearance on March third, will therefore afford an unusual opportunity for which the public are indebted to Professor Wilson's close personal friendship with President MacCracken.

FIFTEEN STUNTS FOR HOOK NIGHT CELEBRATION

Thirty Men Have Agreed To Perform
For Multitude To-night

To-night the annual Hook Night celebration will be held, and the affair promises to be a big success. Contrary to the management of this event in past years a definite program has been arranged, and the fifteen stunts will be given. This will represent the dramatic ability of thirty men. Among the numbers will be the wrestling and booting matches, pianololo, some selections by the cornet and two songs by the Glee Club. The identity of the members of the Hook has not been disclosed, and that individual who wear a mask, is more or less a reason to believe that Mr. Walter Humphreys has been given the task of keeping the experience a secret.

The entertainment committee wishes to announce that tickets must yet be listed if one is left at the Cape to that effect. Tickets are now on display in the Union. They are a banner, a pillow cover, and a pennant. The proceeds are for the benefit of the Architectural Club.
