Friday morning of this week ballots will be left at the Cage for all men who have been carrying on the work, and their friends, who want the help of Gen. Wm. M. Black of the Sanitary Engineers, are doing joint investigations being carried on by the graduating students. Mr. M. R. H. Stanlon, 1912, in Chemistry. Vice-President, Merri E. W. DeWitte, 1912, and Sanitary Departments, there seems to be at present a lack of interest in research work by the graduating students. Mr. R. B. Shilf, who is working for a degree of Master of Science, is now investigating the disinfecting value of ultra violet rays, which he has been working on for some time. Among the works of research work by Professors Phelps, Morss & Whyte Co., of the Liberty Bell Gold Mining Co., the University of Pennsylvania holds its Seventeenth Annual Relay Races this spring and they promise to be more important and interesting than ever before. All the big colleges including Harvard, Yale, Michigan, and Pennsylvania will be represented by field teams, which will make a repetition of the magnificent racing that has been taking place at Harvard the past few years. The University of Pennsylvania holds the Eastern Inter-collegiate Relay Races, and has the highest class in field sports. Chicago will be represented by the wonderful performer Davenport, who holds the Western college championship for the quarter, who will be sure to win them also. Next week one minute and one minute and one second respectively. Mr. Cornell will send on Craig, the Inter-collegiate 220 yd. championship holder, who equalled the world's record 220 yd. time in 1902, to the Evanston carnival for all that is best in the college. All the big colleges, including Yale, seems the only college that has high calibre teams out for one or more championships. By reason of the number of school and college teams that have already entered, it is evident that April 27 will be more than 250 college and school teams in competition.

In spite of the fact that in Chemical and Sanitary Departments, there seems to be a good deal of interest in recent research work by the graduating students. Mr. R. B. Shilf, who is working for a degree of Master of Science, is now investigating the disinfecting value of ultra violet rays, which he has been working on for some time.
