**GROUND BROKEN FOR NEW SUMMER SCHOOL**

Electricity and Modern Sanitation to Feature Civil Camp at Gardner Lake.

President Maccluer announces the breaking of ground for the Summer Engineering Camp at Gardner Lake, Maine, near East Machias. The work of laying the concrete foundations will probably be pretty well finished before the snow flies. The wooden permanent buildings will be erected as early as possible in the spring, and the whole camp will be ready for the summer course of the civil engineers which will come early in August.

The camp grounds, which have been purchased and presented to the Institute by an anonymous friend, include more than a square mile of land at Crosby's Point, with an outlook on the water on both sides, and more than three miles of above Lake. Through the purchase of the land, Charles W. Eaton, '84, of Haverhill, Mass., and Shattuck, a Gift to the Institute a check for ten thousand dollars for the purpose of erecting permanent buildings at the camp. The plans call for three wooden buildings on the bluff facing the main lake. They will be located in the vicinity of a level place one hundred and forty feet above sea level. The central building is to be the administration building. On the left, as one faces the group, is the dining hall, kitchen, and on the right the dormitory room.

The administration building, of which there is a central feature, has living room, thirty feet square, rising thirty feet to the roof. At the back is an ample open fireplace with a massive chimney, whose broad front will afford room for the social and entertainment. It will be fitted with a heavy oak mantelpiece of rounded stone tuckered. The room will be a comfortable and cheery meeting place for the students and professors alike.

The administration building, as at Calamo, has for a central feature the living room, thirty feet square, rising thirty feet to the roof. At the back is an ample open fireplace with a massive chimney, whose broad front will afford room for the social and entertainment. It will be fitted with a heavy oak mantelpiece of rounded stone tuckered. The room will be a comfortable and cheery meeting place for the students and professors alike.

Flanking the great central hall in the Casino are rooms for the instructing staff and the physician's head quarters. The upper story will contain two class rooms, twenty-one by thirty feet, lighted by great dormer windows, twelve feet wide, and in addition there will be three sleeping rooms in the front part of the house. The main dining room has room for one hundred and sixty-eight covers, and it will have a first-class kitchen equipment to do all necessary cooking. The draughting room is fifty-six by thirty feet, with twenty-four tables, affording seventy-two working places. The room is high arched and filled with windows, so that there will be an abundance of light.

The students will live in tents, and on the right the dining hall.
