**CANDIDATES FOR HOCKEY AT ARENA**

**Practice Tonight From Six to Seven O’clock—Big Squad Needed.**

There will be a practice for all who are interested or wish to try for the hockey team at the Arena tonight, at 6 o’clock. The following arrangements are to have the entire ice from 6 until 7 o’clock, and it is hoped that many will be present.

To turn out a team that will properly represent M.I.T. a large number of players must be on hand from the very beginning. The question was a cement to hold it together. The oxide of magnesia not being used, the most adequate. We hope to be able to show up as an important number.

**PROF. SEDGWICK ON TRIP TO PITTSBURGH**

Has Continued Work On “Dangers of Illuminating Gas”

Here Next Week.

Professor W. T. Sedgwick, head of the Biology Department, in the meantime, was on a tour and has just completed two years ago to consider the various problems of the subject. This through this office became well known in the city which he is visiting. He will address the Boston Society of students tonight upon “Mysteries Science and Public Health.” On Thursday evening he has been invited to give an informal talk on another of the M.I.T. Pittsburgh Association.

Professor Sedgwick will then go to New York City. He plans to speak before the Harvey Society of that city on Saturday evening, his subject being “Illuminating Gas and Public Health.” This speech will be in a way the extension of the report to Boston Society last winter, the subject of which was, “Illuminating Gas to the Mortality Rate.” This matter has been carefully investigated by the Biology Department, and Professor Sedgwick is probably the greatest authority upon the subject of gas hazards.

Dr. Sedgwick is expected to return the first of next week.

**E. H. S. GRADUATES.**

All are Requested to be in Union This Afternoon.

All men from the English High School and all our graduates M. I. T. and Tech who are on their way are invited to meet and discuss any subject of interest.

**TECH HAS VISITOR.**

**Senior Ferlini of Brazil Investigates M. I. T. Methods.**

The Institute of Technology has as a guest Senior Jose Ferlini, Secretary of “The College of Engineers,” a university in Brazil.

The institution which Senior Ferlini represents is one of the finest South American technical schools. It produces an immense body of engineers, scientists, and workers in the various fields of science and art. The Brazilian government has decided to send a number of students to the leading scientific schools of the world. The State of Sao Paulo, Ferlini has noted, is considered as the greatest authority upon the mat-
