Important Matter to Be Decided

PROF. NOYES FAVORS

HONORARY SOCIETY

Two years ago the question of the establishment of an honorary scholastic society at the Institute was agitated by R. G. Geelin, then president of the senior class. The matter was discussed long and carefully, but there was not enthusiasm enough to warrant the establishment of such a society.

A few weeks ago the Institute Committee responsible for the request from the Faculty requesting a conference in regard to the matter. The Institute Committee appointed C. E. Best, 1913, J. C. Whitteleys and Bates Torrey a sub-committee to investigate the matter in connection with the Faculty.

The choice of the form of forming such a society seems to lie between forming a local society here at the Institute, forming a local society in some other town, or petitioning theepsilon Xi or Tau Kappa Pi for a chapter for the local society. The former in the opinion of the sub-committee is the best, for the reason that one under consideration two years ago.

Professors Jackson, Shimer, Benedict, Warner and Wilcoxson of the Institute Faculty are members of the honorary engineering fraternity, and although not as well known as the former, has its particular advantages by being seriously by the students of engineering and technical schools. Both are being considered seriously by the committee and it is probable that each will be put forward in an article in these columns the latter part of the week.

Professor Page, for several years Assistant President of the Institute, in a personal interview stated that he felt that in the formation of such an organization that would bring together students of different classes with the aim of learning the holds and men who due to interest in the wireless arts were not known to each other and who were unable to get in touch with men through the activities. He felt that the wireless fraternity is one of the most important features of the society as a whole and those reasons were adequate to give the secretary their name, address and call number. He intended to get out a list of all members in the vicinity of Boston, giving their telephone numbers if available.

The Wireless Society is active this year, is shown by the big increase in membership and by the imposing list of talks that the officers have already arranged for. Several members have arranged to present papers at some future meeting.

The Wireless Society will hold a meeting this evening at 4:15, in the Union. All who expect to become members should come, for Dr. Pender, the representative of the society, with the Faculty, is going to tell the society what it stands in relation to the school, and what its members are expected to do when wishing to use the tools and apparatus of the various departments for research work.

Since the last meeting the committee appointed to procure a new roof for the gymnasium has found that the present one may be the carpenter makes is. This roof will be the wireless touch, for already the instruments, with the sending and receiving, are installed and working. The station has a normal capacity of two members, so that members are able to calibrate their own condensers by it. The other receiving instruments, in the society's outfit have already been calibrated.

After the arrival of a better transformer, which is due next week, the sending capacity will be increased more than ten times. At present the station has a critical relationship between the stations of five members who have both sending and receiving sets, as well as with the twenty odd receiving sets of other members. A list of all members will be published in the Union. In order that this list may be best used the men are requested to give the secretary their name, address and call number. He intends to get out a list of all members in the vicinity of Boston, giving their telephone numbers if available.

The Wireless Society is active this year, is shown by the big increase in membership and by the imposing list of talks that the officers have already arranged for. Several members have arranged to present papers at some future meeting.

WRESTLERS PROGRESS

The largest squad ever promises a great team this year.

This year the privilege of being ex counsels has been granted to Prout who reported regularly for practice. As a consequence a larger number of candidates have over reported for this team than ever before, and the team is going to be a strong one.

Captain Smythe-Martin is putting in faithful work coaching the new men, who are making rapid progress in learning the holds. The majority of the men have feather weight dates than have ever reported for this team, and the team is going to be a strong one.

The evidence seems to point this year toward a wrestling team of which the Institute will be proud.

Forty-five Chinese students are enrolled at Columbia University.

Edward L. Perkins has given $2,000 to Williams.

OLD STARS TO BE WITH KOMMERS SATURDAY

Dinner in Union at 6:30 on December 2--Tickets for Sale At Cage Now.

Architectural Eng.

FIRST GATHERING OF WIRELESS CLUB

Smoke Talks by Professor Lawrence and Dean Burton--Eaters Later.

Last evening the Architectural Eng.

East Coast.

SATURDAY, DECEM.
