"POP" CONCERT TO BE HELD IN UNION

Tickets for December 8 at Cage — Orchestra Will Play — Rehearsals.

The Entertainment Committee of the Technology Union has made preparations for a Pop Concert to be given on Friday night, December 8th. The evening will be a great success, and it is hoped that a great number of students will avail themselves of the opportunity to be in closer touch with their fellow Tech men.

The Institute Orchestra will play selections from familiar operas and theatres, and the good Old Tech songs will fill a large part of the program. Printed copies of the words of the college songs are to be distributed, and the men who are present will be invited to participate in some rousing melodies. Pfitz rehearsals will be served during the concert for the small fee of fifteen cents. The exact nature of these rehearsals has not been definitely decided upon yet, but you may rest assured that they will be of the first order.

At the Union on Friday evening, December 8th. Remember that tickets may be obtained at the Cage or from Mr. Achard, chairman of the Entertainment Committee.

ARCHITECTURAL ENG.

mode, taking into account the materials for building.

The growth of the cities demanded higher buildings in the congested districts, and in 1885, when steel beams were made, this demand could be more easily met than previously. But here the architect and the engineer separated, thus causing great trouble between the planning of a building and the actual construction. Option 2 was created in response to just such a demand. However, as was said before, the designer must work with an engineer or confusion will result.

Dean Burton was present and talked about his work. The growth of the cities demanded higher buildings in the congested districts, and in 1885, when steel beams were made, this demand could be more easily met than previously. But here the architect and the engineer separated, thus causing great trouble between the planning of a building and the actual construction. Option 2 was created in response to just such a demand. However, as was said before, the designer must work with an engineer or confusion will result.
