NEW SUMMER SCHOOL DESCRIBED TONIGHT

Every Sophomore in Courses I and XI Expected—Freshmen Invited.

All who do not know about the new Engineering School at East Machias, Maine, are invited by the Civics to the Union tonight. Every Sophomore, Junior and Senior in either the Civil or Sanitary Engineering Courses is expected to be present, and all Freshmen who are interested in these Courses ought not to miss this special opportunity to learn of the new plans.

Professor Spofford intends to give a short address and refreshment time, each speech to be as interesting and concise as possible.

Professor Spofford and Professor Robbins will represent the Faculty’s view of the new plan. Four prominent graduates are going to tell the society of what they have found interesting and what they have discovered about the establishment of the new school.

Three men are Leonard MacLeish, ’90, of the firm of Mecains & Biddle; Frederick H. Fay, ’92, Deputy Commissioner of Public Works in Boston; and Albert Bemis, ’92, former president of the Alumni Association, and A. H. Kilham, ’98, of Kilham & Hopkins, the architects who designed the campus buildings.

Unlimited refreshments, as well as unlimited speakers, are sure to be on hand when the Union fills tonight with Civics and with smoke.

RESULTS OF BALLOTING.

(Continued from Page 11)

It is to be observed that the only student and alumni who voted were both opposed. Among the classes the table shows significant results, since the Senate, who were supposed to be the most interested, cast the fewest votes. Another thing to be borne in mind is that the men in favor were more likely to register their decision, since they were by far the most interested in seeing the thing carried to an end. On the contrary, the Nones were less inclined to care about the result, since it is not a question about an established thing.

A few other Items are: 52.7 per cent. were in favor, and 47.3 per cent. were opposed. Considering the other votes, which would be counted as the rule in regard to time limit being fixed, the question has a different aspect, and it would be approximately 50-50 to 49-51. In any event the result is not conclusive, and if finally put up to the Institute as a whole, or to one class, will result in a close race.

EXPERIMENT ON FROUDE.

(Continued from Page 111)

From Professor Spofford and Professor Robbins to determine whether the results were accurate or not. The tests of the last season brought out the fact that one well constructed propeller will do as much work as another, settling the dispute over the pitch necessary in a well constructed propeller.

A chronograph developed by H. A. Winner records the time of the propellors and the time in notches for every half-second. It is one to be sold by Charles G. Wold, an enthusiastic yachtsman, that the idea was carried out, and from the benefits received it should be kept going.

BIBLE CLASS MEETING.

This noon, at 1:30, the T.C.A. Bible class will hold their second discussion on Christ's attitude toward the criminal; the woman taken in adultery. This is the same topic that was discussed yesterday afternoon, and those who could not find time to attend the first meeting are invited to attend the one today.
