MEETING OF MINERS
IN UNION THURSDAY

Students Invited to See Slides of the Scenery of the Rhine.

The Mining Society will hold its open meeting in the Union Thursday evening. Instead of on Wednesday. All are invited to come and see the wonderful lantern slides with which Professor Harvey W. Shinier will illustrate his talk on "The Geology and Scenery of the Rhine." He has been through Europe several times on geological work, and on these trips, he has gathered a collection of views of that most beautiful section of the world.

Dr. Shinier is now Assistant Professor of Paleontology at the Institute, having taught at Columbia and Yale Sumner School before coming here.

The officers of the Mining Society want all the men who are interested to come to the meeting Thursday evening, and we believe that no man will go away feeling that he has lost time from exam plugging.

MR. MULREADY TO TALK TO CATHOLIC CLUB
Interesting Reports of the Committee to Be Heard.

This evening the Catholic Club will hold its first meeting of the year, and according to the usual custom, the committee and the visitors who are members on this occasion, and they are very fortunate in procuring such an able speaker.

Mr. Mulready is the chief probation officer of the courts of the State of Massachusetts, and consequently has had the opportunity of coming in close contact with the criminals of the world. This class of people are little known to the outside world, especially the juvenile cases, in which Mr. Mulready has taken great interest, doing remarkable work in this field. The success which he has achieved in this work is due to his intimate knowledge of the members through the classes, and the manner in which he handles such problems. His talks tonight will undoubtedly be of great interest to all.

There will be a great number of surprises sprung at this meeting which will be of interest to all the members. The first report of the dance committee will also be given at this time. The chairman, G. C. Webb, has had every man on the committee working overtime and he has accomplished surprising results. His report will be of great interest to all.

The question of slides is also to be broached before the members of the committee and will probably be chosen at this time, as the dance orders must be given out in the near future. Every member of the society who is at all interested in the society should be present at this meeting.

"Johnny" Grant has been around town for a few days, and is looking well. Saskatchewan weather must have agreed with him.
