COURSE I MEN BUSY
WITH THERIUS WORK

Experiments With Concrete Deal
With Its Constructive Properties.

Thesis work is coming in for a large part of the efforts of many of the Course I men. Two of the men are continuing their thesis work of last year in the study of concrete. The reference to its tension strength. Two other students are making determinations of the parting-strengths of an angle of concrete. They are making concrete specimens of various sizes in order to find the effect of all possible combinations of the ingredients on the strength of the mix.

Other students of the department are also testing concrete in small arches under a distributed load. To distribute the load evenly at different times after being mixed to determine the effect of this treatment on the strength.

Another feature of the work is the testing of the repairing power of small arches under a distributed load. To distribute the load evenly at different times after being mixed to determine the effect of this treatment on the strength.

RIFLE CLUB MEETING.

Tomorrow at 1 o'clock the Varsity Rifle Club will hold a meeting of the most important in Rogers 26. It is hoped that the men will attend, since there was not a quorum useless since there was not a quorum.

The section of the role of the car barns and machine shop is leased to the city of Cambridge by the Boston Elevated Company. This last section is leased to the city of Cambridge, Mr. H. F. Sawyer and E. R. Springer, also a Tech man, were the designing engineers of the construction work.

GEORGE W. BROWN
