FRESHMEN TO MEET MUSICAL CLUBS

Last Important Practice at the Field Tomorrow Afternoon.

The Freshman baseball team will have important practices at the Field tomorrow, and as this is the last practice that the team will have before playing English High on Saturday afternoon, it is very important that every candidate should be there.

The team has been working hard and is in good condition. Most of the men have played on other teams before coming here, and there is no reason why, with sufficient practice, the nine should not improve greatly.

Boyer, who pitched at Medford yesterday, and Maloney, who both played on the team at Spring Hill College, New York, A. and B. respectively, have all played on other teams, and promise to increase the strength of the team before coming here, and there will be a close game is anticipated, and the promise to increase the strength of the team.

The members present at the meeting included five Tech men, the chief engineer and two of the resident engins. Mr. Briggs read several selections, which are justly noted. The presentation of the sewers in the nature of the work, the results of the investigation of the sewers were reported upon by Mr. Eddy in a novel manner. He gave statistics of the death rate in Louisville before and after the laying of the sewers, and the decrease in the same, and the decrease in the number of deaths. But even more wonderful than this was the work done in the connection between the health rates in Louisville and those in larger cities for that of the former is surprisingly low.

AERO CLUB MEETING.

A Few Members Hear Talk on Propeller Testing.

The Aero Club had a meeting yesterday afternoon, at which the following members for the year were re-elected: For President, E. L. L. Oster, '12; 1. C. A. Talk--Union.

For Treasurer, Thomas, '13; 1. C. A. Talk--Union.

The members present at the meeting included five Tech men, the chief engineer and two of the resident engins. Mr. Briggs read several selections, which are justly noted. The presentation of the sewers in the nature of the work, the results of the investigation of the sewers were reported upon by Mr. Eddy in a novel manner. He gave statistics of the death rate in Louisville before and after the laying of the sewers, and the decrease in the same, and the decrease in the number of deaths. But even more wonderful than this was the work done in the connection between the health rates in Louisville and those in larger cities for that of the former is surprisingly low.

NEW WATER COLORS.

Robinson, '08, Exhibits Recent European Work in Pierce.

Today an exhibition of water colors by Mr. J. Robinson, '08, will open in the display room of the Architectural Department, on the fourth floor of Pierce Building. The work consists of measured drawings and a large number of sketches done by Mr. Robinson while on a visit to Europe last year and a half. He has been since his return connected with the office of Guy Galloway, the designer of the Museum of Fine Arts in the Penway.

There seems to be enough encouragement to keep any man from being thirsty.

About time for the Tech pins to arrive.

The rifle club expects to meet the rifle club at the University of Illinois, the present day and extend to the present day. It is claimed with a pipe no larger than the one used last night a plate ten and a half inches thick can be cut. Mr. Kershaw had many interesting photographs of the Maine which were shown after the talk. The Musical Clubs seemed to enjoy the "best floor in the country."

PRINCETON won the inter-collegiate water polo championship by defeating the University of Illinois, the score being 4 to 2. They also won the swimming meet by a score of 51 to 31.
