SENIOR PORTFOLIO
TO BE OUT ON MAY 10
Book Now at Printer's and Will Appear First at Senior Dinner.

Work on the Senior Portfolio is now completed, and the committee is expecting a rise in its exertions, well satisfied with the results. They desire to express thanks to the class and a whole for its cooperation in making the portfolio complete, to A. H. A. for the splendid photographs which he furnished, and to President Kellogg, in whose hands they are placed for the attractive cover design.

Printing and binding is now underway at the University Press, Cambridge, and will be finished by May 15th, when the book is to appear at the Senior dinner. All those who have not yet ordered a copy strongly urged to do so at once, as the extra books ordered from the printer are limited.

The committee announces that any men desiring to keep their costs may have the same for the small sum of fifty cents. As the regular price of those is $1.25, it is plain that here is a rare opportunity to preserve one's business in copper. Orders will be taken by any member of the committee.

STRAW BALLOTS.

(Continued from Page 1)

Advantages of Straw Ballots. - There is a general feeling that the ballot will contain a record of the preferences of the voters, and that it is therefore essential that the ballot should be presented in a form which will enable each voter to indicate his choice without fear of being misunderstood.

In order to meet this objection, the ballot has been devised in the shape of a straw, which is cut into small pieces, and which is then laid before the voter in the shape of a circle. Each piece of straw represents a candidate, and the voter may select any number of pieces, and place them in a basket, which is then taken to the polling place.

The ballot is then slid into a box, and the voter is allowed to examine it, and to make any changes he may desire. The ballot is then taken to the counting room, where it is examined, and the number of pieces of straw is counted, and the result announced.

The advantages of the straw ballot are many.

First, it is simple. The voter need only count the number of pieces of straw, and the result is at once known.

Second, it is secret. The voter is allowed to make any changes he may desire, and the result is not known until the ballot is examined.

Third, it is efficient. The voter is allowed to examine the ballot, and to make any changes he may desire. The result is at once known, and the voter is allowed to make any changes he may desire.

Fourth, it is easy. The voter is allowed to make any changes he may desire, and the result is at once known. The voter is allowed to make any changes he may desire, and the result is at once known.

Fifth, it is cheap. The voter is allowed to make any changes he may desire, and the result is at once known. The voter is allowed to make any changes he may desire, and the result is at once known.

In conclusion, the straw ballot is the most efficient, and the most secret of all the methods of voting. It is simple, secret, efficient, and cheap. It is the ideal method of voting, and it is the method which should be adopted for all future elections.
