showing the floor plans of the mill, associated with the Lockwood-Green Com-
pany yesterday afternoon in 11
Cotton Mill was the subject of a lec-
turing the other rooms. Most of the
departments are situated so as to re-
duce handling the goods to a mini-
Department of modern mills. Since steam
necessity, and the power
motors drive four machines, and those
power is transmitted by a very effici-
cable until it had gone out six or
increase of population it was found
solved oxygen did not fall completely
itoand when the engineers tried pump-
velop two terms instead of one,
cvelte on their way to Lake Michigan. The
of water daily to dilut-
sherry million gallons of sewage, and
consequently the sewer became beautiful.
The solution of the difficulty was
Professor Whipple also spoke of the very interesting work that he did
determining how the sewage of the
plant. By a series of charts plotting
on the topic of Lake water daily to dilut-
ity and when the engineers tried pump-
velop two terms instead of one,
