TECH ISLAND CLUB
(Continued from Page 3)

wee are offering to the class of '85 by F. H. Page, on condition of the establishment and proper maintenance of the Club.

is to raise from three to five thousand dollars from members of the class as a gift to the project, and then invite other Tech men to join the club, at an initiation fee of about forty dollars, the dues being twenty-five dollars a year. This, it is hoped, will make possible the erection of buildings and the improvement of the island, to the extent of about twelve thousand dollars.

The location is an ideal one near Buzzards Bay, where are some of the most beautiful residences on the bay. It has an unobstructive view of Buzzards Bay to Monmouth Point, the two being very close, and a road will probably be built. The committee believes the club should be run in a first-class manner so that members can take their families and friends there at any time during the summer.

RECORD ATTENDANCE EXPECTED THIS YEAR

M. A. H. S. Sends Largest Number of Men to the Freshman Class.

The Massachusetts Institute of Technology begins its new year with the large figure of 1490 students enrolled. This number has been passed only once at this date, when last year the grade figure was about fifty greater. This indicates continuing interest in the popularity of Tech, for certain schools, like the students who come for special work, numbering up to about fifty and seventy-five, has hardly yet given in any number.

A most interesting feature is the large percentages of students, averaging for the regular high school classes not less than seven and fifty percent, who have returned to continue their studies in regular form, the third-year students of last year returning for their fourth year, with eighty and five per cent, of those who were registered when school closed in the fall. This is a fine record, which is testimony to the consistency of the courses. The men new to the Institute, more than five hundred in number, have the usual characteristics in point of distribution: there is the usual preponderance of New England men, many others who come from the ends of the earth to study in Boston, and the large number—now already 150 of the roister who come to the Institute from others colleges.

Of the 123 students registered in the first year, 222 are from Massachusetts, the preparatory schools in the vicinity of Boston constituting the greater part of these. As usual, Mechanics Arts High School leads in this respect, sending 15 of her number to enter the Freshman class this year; English High comes second, with 15; Deerchester High and Boston Latin each three; the High School of Commerce, two; Ridge Manual Training School, eight; Cranney Hall, six; Phillips, Dexter and Andover, two, and Berwick, six.

The Western States are represented by a few, the South, twelve, and Alaska, one.

Many men from other colleges find it advantageous to round out their education by coming to the Institute, as is evidenced by the fact that Dartmouth and Williams each have sent seven men; Yale, six; Harvard, four, and other one, two or three from Amherst, Boston University, Columbia, New York City, Nebraska, Pennsylvania, U. S. Naval Academy, West Point, Bowdoin, Princeton, Buith, Redcliffe and Wellesley.

A REAL timber-topper this Velveteen has hung from the timbers of the warehouse for over two years. This is to get rid of the leaf femininity—only time and patience can make men take "take" to tobacco. Velveteen is perfect meadowness—a flavor delightfully good—superb smoking. Something you see at the dealer's ask for "Velveteen" and take a chance. It's only by comparison that Velveteen is the smoothest.
