H. Rogers, 1915 ............ Societies Editor.

Lindsay Lamb, 1916 ...... Advertisement Editor.

P. T. Mn., 1917 ...... Secretary.

Subscriptions: $2.00 per year, in advance.

THREE TO BE ACTIVE IN WORK FOR STUDENTS

Officers Hope For Considerable Increase in Membership This Year.

THAT branch of the T. C. A. activity which comes near into contact with the student body in general is the Thursday night meetings, given in the Union by prominent men of all professions. These talks are of an extremely practical nature, and coming as they do from successful men, each of whom is an authority in his own line, they are invaluable to every Tech student. Each such talk has been announced beforehand by bulletin and is THETECH. The first talk will be given by Mr. W. R. Reade, Thursday, Dec. 12.

Another department which deserves great popularity is the Discussion Course, each composed of about twenty members, which meet weekly, during the academic season of the year, to meet the emergencies of life.

The courses in the two institutions are not so abroad, and of even more importance, to train them to meet the emergencies of life as the excellent reputation of the school. The courses in the two institutions have this thought either consciously and unconsciously in mind. 

We propose during the present school year to run a course of editorials dealing with the future prospective parts of certain of our courses. The first of this series of editorials is contained in this issue.

THINKING.

The trouble with the graduates of technical schools, a large percentage of whom are employed by Boston firms. In Dutchman's year, "are they that are in control. They are clever with their hands, but they can't seem to use their heads. What I am after is men who understand that the valuable equipment is not so much the one who knows things as the one who knows how to know things and what to do with them. That is what the employers are constantly saying, and it is the face of it too many undergraduates will go on without committing to memory as if that were the whole of education.
