Rehearsals will begin next Wednesday. Eighteen members of last year's club were examined by Leader E. Allman. The trials were held in the Union yesterday afternoon. Twenty-five new members were added to the club.

The First Call For Candidates

MANDOLIN AND GUITAR CLUB TRIALS HELD

The First Call For Candidates

Professors Spooner, Burton and Russell Captured by C. E. Society.

In spite of the absence of President McManus, and the shorter duration of the baseball game, Huntington Hall was crowded to fill capacity at the convention yesterday, when Dr. E. R. Kelley of Seattle spoke on Camp Sanitation.

The Power of Story Telling

Professor W. T. Hodgdon introduced Dr. Kelley in a short speech, in which he explained that President McManus could not be present on account of a meeting of the Corporation.

Dr. Kelley gave three good reasons why every engineer should be interested in Camp Sanitation. When a man is in charge of a construction camp he can only get the full product of his labor from his laborers by having them in good health. In the second place, every camp is part of the community in which it is placed, and over it the community has supervision of sanitary arrangements. The last, and most selfish reason, is that the life of the engineer himself is endangered by lack of sanitation.

Dr. Kelley distinguished three classes of camps—transient, temporary and permanent. The first is the least troublesome, but the other two require considerable care in the protection of epidemic infections.

He also emphasized several cardinal rules that should be kept in mind. The first and most important is to obey common sense to the letter. He said that Professor Spofford was one of the best as the man who had preached the application of common sense to sanitary problems.

The second principle was the projection of the source of drink, of which by far the most important is water. The protection of the source of drink was another big problem, and this could be secured by screening the kitchen, the meat room, the meat house and the root cellar. The personal cleanliness of the kitchen and of the kitchen staff is also important in the prevention of the food.

For the prevention of typhoid epidemics he said that the proper disposal of sewage was essential. He described several recent inventions that are at the disposal of the engineer to aid him in solving this problem.

Until the present time not much stress has been laid on the matter of proper housing and proper ventilation of bunk-houses. He said that the shower baths have proved a great success in reducing the men to observe the rules of personal cleanliness.

The stories of any system of sanitary rest in the daily observance of the rules, the conservation of sanitary responsibility being absolutely necessary.

Dr. Kelley then described a plan for a construction camp that embodies the principles of the men's club in sanitation. The most notable feature was the, easy separation of the men's club and the horse stable.

He finished his talk with an appeal to the engineers present to think out themselves the social conditions that may exist in any camp of this nature. (Continued to Page 3.)

Yesterday the Progressive Club held its first meeting since it was organized. At half-past one the dozen men present in the Union listened to the report of the last meeting, and after it had been accepted the report of the Nominating Committee was read. The club voted that the men selected by the committee should be the officers for the coming term. The president of the club was A. H. Waitt, 1914. The other officers are G. A. Palmer, 1915, vice-president; R. R. Kennard, 1913, treasurer; and Mr. Talbot, Z. Crocker, J. H., 1914, and M. A. Oettinger, members of the Executive Committee.

The meeting then discussed the nature of the distinctive features for club members, and finally it was decided to leave it to the committee which is to work on the constitution. The meeting voted to require every member in every three years to have some kind of unit election, and all are expected to get their pins from the treasurer of the club. These pins will be sold above face value, and the greater part of the proceeds will be turned into the campaign funds of the Progressive Party. This sale of pins will furnish the club money as well as campaign literature.

The members who were present expressed themselves as being favorably impressed by Mr. Waitt's talk and the officers, so that the club might more readily accomplish its primary purpose of uniting all men of the Institute who are interested in Progressive principles. All the members are expected to be present on Monday and identify themselves with the club and the Party.

stream railroad inspector by the Public Service Commission of the state of New York. Since leaving the Institute, Mr. Stodder has been connected with the management of the New York Central & Hudson River, the Boston & Maine, Chicago & North Western and the Delaware & Hudson Railroad companies.

All 2 o'clock exercises are suspended till 2:30 for the purpose of having Thanksgiving Day.
