SUMMER COURSES.

Compulsory Next Year in Certain Departments.

Under the general policy of making all courses broader, the Institute has announced a change for next year in the work of instruction held during the summer months. In the three summer courses have been offered solely for the convenience of those students who wish to have their full academic work in the field. However, for the coming summer, all under-graduates taking the work of either Mining, Sanitary or Civil Engineering, who have completed the work of the Sophomore year, will be required to take the summer courses offered at their respective departments.

This year the camp of Civil Engineering was held in Maine, and on the present requirements there will be an increase in attendance at about the same time. This will naturally make necessary the enlargement of the camp, and plans are now under way for its development in the most modern and efficient manner.

The regular fire tug-of-war team in Qualitative Analysis in Course 19 will be given during the summer after the Freshman year, beginning with the class entering next fall.

MANY THANKS.

The managers of all Sophomore and Freshman teams are all calling for this meeting with many interesting features. We sincerely hope that a large number of men will make an effort to be present, for it gives a remarkable opportunity to come into close contact with a truly Cosmopolitan group of people where each has an interesting story of his native land, and at the same time is in giving its support toward making the lives of other men different lands a little more pleasant. A formal dinner has been laid aside in the fact that the men have been asked to bring ladies.

MORE MEN WANTED.
