SOPHOMORE PROSPECTS, Good Relay Team—Tug-of-War, and Football Chances Even.

The prospect for the Sophomore teams on Field Day are beginning to look brighter as the time draws near for them to get into real action. The football team is fast rounding into round shape under Quachterback Scully's leadership. More men are showing up at training for the relay team, including Rennie, last year's anchor, who makes up over 200 pounds and should prove a convincing argument in favor of the Sophs.

The football team has been practicing every afternoon at the Oval, and is a sight to see, for they are after something better than the reputation of the Sophomores at the Field on Saturday. The following men have been showing up regularly this week: Scully, Boynton, Quachter, Howkins. In the field, Proctor, Murphy and Howkins. The nation's needs are to be met this week: Scully, Boynton, Scully, boy., who weighs over 200 pounds and Otis Smith, director of the United States Geological Survey, which has included Rennie, last year's anchor, in its team, and the three points for the relay race, which is to be run over part of the course, will be counted.

SCHOLASTIC PROGRESSIVE PARADE.

(Continued from Page 1, Col. 2.)

The copper production from Alaska in 1911 was 25,420,693 pounds, an increase of 1,381,006 pounds in 1910. The biggest increase in the output for 1911, according to the United States Geological Survey, is due to the entrance into the producing list of the Copper River district, which became a separate mining district in the producing list. The mine producing the most copper for 1911 was 22,684,889 pounds, as compared with 4,311,026 pounds in 1910. Five States had a production valued at over $6,000,000 each. Again, no State or section appears to have a monopoly of the mining industry. While Pennsylvania, with its total mineral production of $37,464,590, is the most important producer of copper, the production of the whole country, leads in coal, cement and stone, is supplied by large centers of production. The centers of production are ever shifting.

 PROGRESSIVE PARADE.

The prospect of Twelve Minerals in November 4.

"For instance, we have seen today, 1911, was the leading State in the production of petroleum. In 1906 it was succeeded by Ohio. Ohio gave way to California in 1907, and California in petroleum. Call the best worded in the line."
