President Macaulay's report to the Corporation has again given the Institute an opportunity to express its views on the relations that should exist between it and Harvard. As President Macaulay says, we are past the time when it would be possible to regard Technology as dependent upon any other University. But, on the other hand, we are close to the time when Technology should see fit to play a more active part in the education of youth and express itself in the educational legislation of the State that all its educational institutions do their best to eliminate wastes in their methods of teaching and in the training of their students.

There appears in another part of this issue an article, the purport of which is interesting to the Techian reader, for it has been printed in the history of the paper, Publishers' Circular, published weekly in Boston. The paper contains a special English section, which will contain only men who are employed in the Tech, and which will be published only once a week, in that form.

The prosperity of the Institute was noted only briefly by President Macaulay, and the circumstances of the time will not permit us to do our best to eliminate the wastes in their methods of teaching and in the training of their students.

Mr. Schumacher gave an interesting talk before the miners last night.

Last night's meeting was well attended, and the program was well received. The speaker, Mr. Schumacher, was introduced by Professor Richards, head of the mining department, and was introduced also to the students of the class in mining engineering. He then spoke of the mining industry as a whole, and the difficulties that have been experienced in the mining industry. He also spoke of the mining industry in the United States.
