The Tech, Boston, Mass., December 12, 1912

President Macfarlane's report to the Corporation must be accompanied by a statement from each of the presidents and one from the president of the Student Council. It is hoped that this report will be read with interest, even if it is not formally published.

Mr. Schumacher gave interesting talk before miners last night.

The Mexican Mining Conditions Discussed

Mr. Schumacher gave interesting talk before miners last night.

Yesterday evening, at 8 o'clock, the Mining Engineering Society held a well-attended meeting in one of the small rooms in the Union. After the usual business had been transacted, a motion was carried to the effect that the Sophomore Class be permitted to elect members. This will affect four men. Following this President Macfarlane introduced Mr. Schumacher, superintendent of the New Mexico Mining Co., of Santa Barbara, Mexico. Mr. Schumacher is a tech man, of the class of '94. Mr. Schumacher was a student at Tech.

He pointed out the new mining condition, and that the technology of modern mining is very much different from that of primitive times. He gave the men an excellent idea of what mining was, and the various points of interest in mining. Mr. Schumacher gave an excellent account of some of his experiences during the revolution. The members of the society gave him a hearty welcome.

Before the meeting adjourned it was decided that the members should continue to use the primitive methods of their ancestors, and that they should continue to work on the principle of using the smallest amount of labor. In this way they could come within the range of his experience. The members of the society gave him a hearty welcome.

PRESIDENT'S ADDRESS.

"It would be wise," he said, "for the members of the society to work on the principle of using the smallest amount of labor. In this way they could come within the range of his experience. The members of the society gave him a hearty welcome.
