FIRST INDOOR TRACK MEET TOMORROW

To Be Held in Gym at 3 P. M.

FIRST INDOOR TRACK MEET TOMORROW

To Be Held in Gym at 3 P. M.

Liberal Handicaps Given—Entry Books at Cage.

Entries are now being made for the first indoor handicap track meet of the season which is to be held in the Gym tomorrow afternoon at 3 o'clock. The entry book for this meet is now placed at the entrance of the Union living rooms, and all men who expect to enter any of the events should sign up at once so as to assist Coach Namely, in proportioning the handicap. This list will be closed tonight, but entries may be made with Coach until Monday night, or with the candidates for the position of second assistant manager tomorrow. Every man in the Institute is eligible for this meet, and all Freshmen who are substituting their work for Gym will be required to enter at least one event. The handicap will be very liberal, the best men being compelled to overcome great odds, so the new men should have no fear that they will be outclassed if they go in with the spirit of winning. It is hoped that all candidates for the team will compete in their events in order that the coach may get a line on the abilities of the new track men.

BIOLOGICAL TRIP

(Continued from Page 3, Col. 2.)

to be a popular fallacy, is the idea of hereditary consumption, in only about thirty or forty cases out of the many thousands examined has the disease been known to be from this cause. There remain only the other two ways in which the disease may come: contact by injection and inhalation.

The word injection may, perhaps, need a little explanation. Injection is simply the taking of the bacillus into the system through the walls of the intestines, which they reached by means of food infected with the human variety of bacillus. This is only possible if the food has been in contact with substances having the micro of consumption upon them. The method of inhalation is by far the most common. It consists, of course, of inhaling the germs directly and thereby introducing them to the lungs, which are their final destination, no matter how introduced. It is estimated that a person having tuberculosis discharges about 1,000,000,000 bacilli in twenty-four hours. Consequently the only method for the absolute prevention of tuberculosis is isolation of all cases. This is necessary because no method is known whereby a person may be immunized against the disease, such as vaccination in the case of small pox.

The method of inhalation is by far the most common. It consists, of course, of inhaling the germs directly and thereby introducing them to the lungs, which are their final destination, no matter how introduced. It is estimated that a person having tuberculosis discharges about 1,000,000,000 bacilli in twenty-four hours. Consequently the only method for the absolute prevention of tuberculosis is isolation of all cases. This is necessary because no method is known whereby a person may be immunized against the disease, such as vaccination in the case of small pox.

In connection with his work for the relief of the disease, Dr. Floyd uses the phagocytes as a natural agent. This treatment consists simply in keeping the infected lungs absolutely quiet by compressing it by the introduction of nitrogen between the lung and the walls of the chest cavity. Of course this method is not applicable in cases where both lungs are diseased, as one lung, or at least one-third of one lung, must be retained for the use of the patient in breathing. The apparatus for producing this pressure is very simple, and may be carried in a dress suit case with ease. It is very efficacious in the treatment and relief of advanced cases of the disease.

When Dr. Floyd had concluded his address he was given a ovation of thanks and a "regular M. I. T." Mr. Henry Rueter was then requested to give a talk, and he responded with a word of welcome to the society, and expressed pleasure at being able to serve them. Mr. E. S. Rueter had just returned from the International Architectural Federation. Professor Duesenberg visited the General Exhibition rooms and criticized the fourth and fifth year designs. He will be held this afternoon, and all members of the society are urged to be present.

Writing His Thesis

Strenuous work for the old man, but that pure, wholesome Fatima will help. With each package of Fatima you get a roll of cigarette papers and to the humblest Sent a remittance of 15 cents and you get the fat packed 100 cigarettes for 50 cents. A fine gift for every man and woman. In the natural way:" Distinctively Individual." 20 for 15 cents.
