ELECTRICAL SOCIETY TO MEET TONIGHT

Mr. William McClellan to Speak On Public Service Corporations.

Tonight, at 7.45 o'clock the Electrical Engineering Society will hold an important meeting in the Union. Mr. William McClellan, a promient New York lawyer, will speak on the subject of "Public Service Corporations and the Public," as a member of the Commission of the New York and New Haven & Hartford Railroad at the time of the electrification of the New York end and as far as Stanford. He is now Chief Engineer of the "New Haven." The meeting will be held in the Union, at the prompt hour of 7.45.

COMUNICATION

To the Editor of THE TECH:

Dear Sir:—The communication published in an earlier issue on the subject of the Institute Committee has given me reason for some perplexity. Your communicant invitation to attend and listen to the societies be allowed to choose their own representatives to that committee by general election, rather than be forced to send a certain officer as their delegate who may not be most suitable?

Therefore, should the Institute Committee meetings be continued on the same lines? The communication should not the Undergraduate body be allowed to attend and listen to the discussions and motions as made by their representatives, offensiveness or otherwise, to those who are present themselves?

Promptly, could not the opposition coming up for each day's discussion be published in THIS TECH so that all may know what is taking place? Full of your suggestions, the students will be unemployed.

All of these suggestions are, of course, dependent on whether the Institute Committee (which I understand it is the duty of the student officers to be covered by busy and logically successive arguments) and that you might be interested in this space in your valued paper.

Yours truly,

"Gymics."
