BOSTON C. E. SOCIETY.

Many Tech Men Attend Very
Successful Meeting.

The meeting of the Boston Society
of Civil Engineers, held last Wednes-
day evening, was attended by a
considerable number of Technology
students, who found the evening an
interesting and entertaining one.

Of the four speakers, the first was
Mr. Lewis H. More, of the Civil Engi-
nering Department of the Institute.
He spoke on a new design for a mer-
nable bascule bridge, illustrating his
talk with slides.

Mr. Frederick H. Fay, president of
the Technical Association of
Engineering, the official engineer of bridges and
for the city of Boston, next
spoke on the subject of highway
bridge formers. Mr. John R. Worcester
then gave a short address on initial
strains in steel.

Professor C. M. Spofford, head of the
Civil Engineering Department of the
Institute, gave the closing ad-
dress, describing the work of Thad-
deus Hyatt, a pioneer in the inven-
tion and use of reinforced concrete
in structural work. He made many tests
on the qualities of this material dur-
ing the year 1879, and built of re-
forced concrete one of the first fire-
proof buildings in London. He also
introduced illuminating gratings for sidewalks in the
same town.

These meetings of the society are
held monthly, and Tech students are
always welcome to attend them. An
entertainment for Tech men in par-
sicular is also given once during the
year.

AVIATION LECTURES.

The first lecture in the course on
"Aviation" was given by Mr. A. A.
Merrill last Monday, to 110 seniors.
The lectures are to come every Mon-
day and Wednesday, at 4:10 P. M.
In it he tells the story. We are closing out all our fancy
overcoatings and
Aladdin stove promises. The talk is about the
