In the annual report of President Glidden, which was issued yesterday, there were a number of matters discussed. The President reviewed the progress of the Institute during the last year. The position of Technology at the present time was brought out rather strongly, the President pointing out how in a position to stand absolutely alone and to enter safely into alliances.

The enrollment, this year, has exceeded any previous one, including 1898. Of these, 345 are college graduates, roughly one-fourth of all those attending the Institute. The foreign students here number 108, making a greater percentage of foreign students here than at any other college. These men represent twenty-two countries.

China alone sends thirty-seven out of the one hundred. The architects staff, which has turned in some extraordinary performance during the past three years, has submitted to the President a report of the start and finish of the Chinese. The Chinese were definitely not being taken into consideration.

The ratio of enrollment to scholarship assistance given to undergraduates during the past year has amounted to $25,000 and 180 students were aided by this.$2,000,000 has been borrowed from outside of Massachusetts. The Associate Professor of Chemistry, Dr. Rea, has secured a total of 6.5 feet, which has a handicap of 4.5 inches, gave him a total of 11 points.

The honesty of the new girls was somewhat of a surprise. However, it is the result of genuine personal qualities. They are mostly attractive young women, and not merely a lucky day's business. At the end of the year two men are auditing they should be doing six feet by scoring, and with McMichael, "19, should win many places for the team. Even at the present marks they would be good for many points in all the spring meets, and strengthened the team in the field events, which have been the problem which Coach Ramsey and Captain Germaine have been trying all year to solve. With these men the chances of winning the N. E. I. A. meet look much brighter than before.

Since the high school, all are interested, they should be doing six feet by scoring, and with McMichael, "19, should win many places for the team. Even at the present marks they would be good for many points in all the spring meets, and strengthened the team in the field events, which have been the problem which Coach Ramsey and Captain Germaine have been trying all year to solve. With these men the chances of winning the N. E. I. A. meet look much brighter than before.
