PROPOSED PLANS FOR DORMITORIES

Many Things to Be Considered in Student Housing Problem.

One of the most important problems presented to the builders of the new Technology is that of providing suitable accommodations for the large number of Institute students who will live on their own homes during the school year. The solution of this problem is unusually difficult for Technology, both because of the nature of the problem, and because the problem is being solved without previous experience with regard to this kind of housing. The problem is complicated by the fact that the possibilities of the solutions made by other colleges, where the most part, conditions are entirely different, from those which will exist at Tech.

In working out the problem, the first thing to consider is the general character of the Institute, and what is going to bring about the change. The first thing to consider is the character of the Institute, and, second, by far the most important, the closest allies of the Institute, is an open question, and one in which interested persons are sought without any student conditions prevailing.

The problem of the dormitories is the combination of the intellectual and the social life, and the Faculty Committees, elected an Undergraduate Committee, consisting of six members of the Faculty, to meet with the Faculty and Alumni Committee, and to consider the needs presented to the builders of the new Technology. The logical location for the fraternity houses is the new Technology. Unfortunately the Institute is not large enough to accommodate the fraternity houses in the dormitories, and it will be necessary to secure accommodations for about forty students, in some cases even though the problem is purely tentative, and in some cases even though the problem is purely tentative, and in some cases even though the problem is purely tentative, and in some cases even though the problem is purely tentative, and in some cases even though the problem is purely tentative, and in some cases even though the problem is purely tentative, and in some cases even though the problem is
