MASSONIC CLUB OF TECH HOLDS DINNER
Mr. A. A. Gleason and Major Briggs Speak at Banquet Held in Union.

The Masonic Club held a very successful dinner last evening at the Tech Union, over which H. R. Wor- ley, president of the Masonic club at Tech presided. There were over twenty-five members present and all enjoyed the excellent banquet, of which the high lights were the speeches of Professor Smith and Bradley of the Institute Faculty, and Major Briggs. The latter made a very interesting speech on the benefits derived from being a Mason.

PRIZE ARCHITECTURAL CONTEST UNDERWAY
Outline of Lloyd Warren Prize Competition—M. I. T. Among Contestants.

The Intercolligate Architectural contest is now in full swing. This is a contest in which the students from six of the largest Universities and professional schools are entered. The colleges entered are Pennsylvania, Cornell, Syracuse, Harvard, Brown, and Massachusetts Institute of Tech- nology.

The competition was founded by Mr. Lloyd Warren of New York, and $150 in prizes was given by him. The entries were distributed as follows: $50 for the best piece of work in Class 1, and $50 for the best work in Class 2. The can- didates in Class 1 are required to make a preliminary sketch and pre- sent a final drawing of a Museum of Fine Arts. Only one candidate in their final year before a professional degree will be eligible. This is open to Class 1. Class 2 is open to competitors not yet eligible for Class 1. The subject for Class 2 is a College Laboratory.

Under the regulations of the con- test the students must present their entries at a definite time and place and must make the preliminary sketch before their final design. The time allowed for making this design is nine hours, and during this time the student must not leave the room, nor re- ceive help from, nor examine books, in- struments, or fellow students. The pre- liminary sketches were submitted on February 17. After handing in the pre- liminary sketches the students are to complete and submit the final plans by March 19. The final plans are to be con- formal to the preliminary sketch and the final award is to be based on how well they are made to conform.

Six best plans in each class are to be forwarded to Philadelphia, where the jury will decide the win- ning drawings. At Philadelphia the drawings are placed on exhibition for a few days. They are then shown to each one of the colleges to be placed on exhibition for three days. The jury consists of one representative of each school, and in any case, not in any way connected with the faculty. The form of the jury from Massachusetts Institute of Technology is Allen H. Cox, of the firm of Putnam & Co.

Last year the candidates from the Institute did not win the award, but last year the candidates are working hard to bring the prices back to Boston.

CHEMICAL SOCIETY.
Professor Passano Talks About Scientific Management.

Last night the Chemical Society held its regular March social meeting in the Union. With Prof. Passano of the Mathematics Department as speaker, Prof. Passano gave a very interesting and able discussion of "Scientific Management," and outlined many points that have been suggested by present investigations in treating this subject. The sixty men who were present found the talk valu- able, and showed their appreciation by very hearty applause.

The discriminating man who avoids the common clothes are made of WOOL FABRICS and TAILOR- ING, a little of the former and a great deal of the latter. Our clothing is made by good tailors, every one a SPECIALIST, who is fit to make garments for particular men, it COSTS more, but it shows in a hun- dred suits or overcoats as well as in a single one of either, and it means infinitely more satisfaction to the wearer.

Other clothing may look ours, but you will not find the same amount of GOODNESS in it.

This season's offering is composed wholly of garments that fully justify the discriminating man's standard of correct style and good taste.
