HOCKEY TEAM ELECT
N. D. MACLEOD CAPTAIN
C. B. ROGERS AND R. L. FLEETNER
To Manage Team Next Season.

At a meeting of this year's hockey team, yesterday noon, in the Union, N. D. MacLeod was elected captain for next year. All the members of the team were present, with the exception of S. S. Eichorn, who was off at the baseball game. L. H. Burritt was favored for the captaincy, but on account of the intercollegiate Four-Year rules he is unable to serve. This is the fourth year that Burritt has played hockey, one year at Williams and three here at the Institute. For this reason he will be unable to play next year.

This is MacLeod's second year on the team and his work at center has always done much to strengthen the team. His shooting and passing in the games this year was especially good.

C. B. Rogers was elected manager and R. F. Fletcher assistant manager for next season. Both these men are members of this year's team. MacLeod, Rogers, Fletcher and Bichon will be the only men on this year's team back next season, but considering the strong showing made by many of the substitutes, it is hoped that the Institute should produce one of the best teams Tech has ever had.

CLASS OF '93 DINNER.
Talk on Survey of Boundary of Costa Rica and Panama.

The Class of 1893 had a dinner and talk last night in the Union, at which fifteen members of the class were present. After the dinner the man gathered upstairs and a stereopticon lecture was given by Mr. John Howard, '93, on the recent survey of the boundary line between Costa Rica and Panama.

For many years this line has been in dispute, and a few years ago President Loubet of France was asked to arbitrate the question. However, his decision was not altogether satisfactory, and the Chief Justice of the United States Supreme Court was asked for an opinion. He decided that a survey of the eastern part was necessary, and a commission was appointed, two by himself and one by the two interested countries. Each country bore one-half of the expense of the survey. Four parties were placed in the field, composed of five white men each and about twenty-five negroes. There were also a culinary, medical, and disbursing department. Great care was taken to examine and ensure the accuracy of the observations. The United Fruit Company has about four thousand square miles of banana plantations in the two countries, and the accurate location of the boundaries of those plantations is necessary. After this work was completed, the survey was turned over to the Department of the Interior. This work was done very well by the American officers, who were I believe, the only ones able to handle this kind of work.

TECH SHOW TRIP.
The suggested action on the show trip to New York is very important, although not more so than other decisions. The Tech has expressed its opinion regarding this trip; we respect it that it cannot help but mean much to every man in the Institute, and all different athletic teams. It is open to all.

FOOTBALL TEAM.
The rest of the season's games are to be decided at the meeting of the Management tomorrow noon. No decision will be arrived at on the question of the horses for this year, but as all the members, instead of coming to the meeting, will meet at the postoffice at 7 p.m. to vote, we are satisfied that the team will be taken especially for the Senior Portfolios.

EIGHT DAYS FOR A SURVEY.
Fourth of July to the 11th of July, are the dates fixed for the survey of the boundary line. This trip to New York is very important, and we are sure that every member of the Institute will wish to be present.
