DRAWINGS ARE SENT TO PHILADELPHIA

Plans Made by Members of Architectural Course Show Much Thought.

The drawings submitted by the students of the Department of Architecture have been forwarded to Philadelphia by a committee made up of representatives of each of the competing colleges. The drawings are particularly good and show much conscientious work. The announcement of the winners will be made in a couple of weeks.

Before the drawings were sent they were submitted to the students of the department for examination and rating, and the drawings taken on the merits of the drawings. The student vote was as follows: 1st, U. C. Schiess; 2nd, F. S. Wheaty; 3rd, W. L. Williams; 4th, E. L. Williams; 5th, C. Rosenberg; 6th, A. Corson.

The contests in the second class received the following number of votes: P. E. Wheatby, 39; U. C. Schiess, 37; F. S. Wheatby, 32; E. L. Williams, 24; T. H. Mace, Jr., 22; C. Rosenberg, 21.

Juniors will Have Novel Entertainment

Vaudeville Performance Given By Members in Exciting Much Interest.

Great enthusiasm returns just now among the anxious juniors over the coming semester. The entertainment is to be held Thursday evening at 7.45, in the Union, and the idea is to rival any other meeting ever held in that place in fun and merriment. The vaudeville act, which is to last for one hour, is to be the main feature of the evening. The winning model of the vaudeville performance is that all the students participate, and from the length of time allowed for the surprise act it is expected that the performance will be of quite a varying nature. The free "smokes" will not disappear, but keep every one happy, since the committee in charge of the entertainment has provided a good supply of them.

The committee of the Faculty consists of T. C. Morgan, Professor of Chemistry, and E. E. Buehler, Professor of Engineering. The committee of the seniors consists of W. H. Hamburger, chairman, M. D. Ballys, and P. E. Merrill.

SHOW REHEARSALS.

Important Meetings This Week—New Instructor in Dancing.

The Tech Show is proceeding very satisfactorily and it will not be long before the show is ready. Following is the program of rehearsals for this week:

Tuesday, at 4.15, the cast and chorus will go through the book and musical director of Mr. Sanger, starting at the beginning and going as far as possible.

Wednesday, at the same time, Mrs. Adams will be rehearsing the chorus, under the direction of Mr. Sanger, starting at the beginning and going as far as possible.

Thursday afternoon Mrs. Adams will have rehearsal of the chorus and Mr. McLaughlin will conduct a complete song rehearsal with the cast, chorus and orchestra.

Friday, at 4.15, the cast and chorus will go through everything in connection with the orchestra, starting with the first of the book and going as far as time allows.

Saturday, Mr. McLaughlin will have everyone in a song rehearsal from 1 to 3 o'clock, after which Mr. Sanger will take charge of the chorus.

Rehearsals are very important. It is necessary that the chorus members keep up and regular and, for it is only afterward that much of the success of the show depends.

POSSE GYM STRENGTHENING.

Anyone who has been away from the laboratory for any length of time, except for exercises, activities, and other such things, has no right to expect that the Institute Committee is primarily for the supervision of all activities. The representation should be in proportion to the wants which they have at home. Since the Institute Committee would decrease in efficiency as the time goes on, it is wise to do away with the rating power of the activities. The Institute Committee meetings would still be open to any man wishing to bring special matters to its attention. Some interesting talks.

INTERCOURSE RUN SATURDAY AFTERNOON

Course II is the Favorite—All Other Courses Are to Combine.

Saturday afternoon the annual intercourse cross-country race will be held. This spring event has in recent years aroused a large amount of interest among the non-athletic men of the Institute as well as the track men. The run has always brought out a large number who are not taking track work. Last year the courses were combined into three and, it is hoped, will also be the case this year. Courses I and IV won the race last year, and this year the same two Courses will probably be combined. The remainder of the Courses will be split off into groups of three or four to the teams. Course I will be regarded as the strongest team as it has won and two of the other three regulars or its members of the course, and if only one team can be entered, this will be the case. Course II will come in as second only to the first place, and probably the last man on the Mechanical Engineering team that counts, they stand a good show of coming off with the honors.

Capt. Nye of the cross-country team is not going to run in the race. In the present season there will be no race on a distance run. Nye's loss to the team will be more than made up by the first man to finish and the last man on the Mechanical Engineering team that counts, they stand a good show of coming off with the honors.

THE PRELIMINARY CHESS TOURNAMENT.

Preliminary Games Have Been Played—Semi-Finals Now.

The preliminaries in the chess tournament have been played during the last week have now been played. The results between the eight men who entered are as follows: W. E. Merrill won two games from D. C. Blasing; E. C. Norwood defeated J. A. Root; and W. B. Brown and D. E. Woodruffe each put two games from three from C. E. Woodruffe.

Two weeks will be allowed for the games in the semi-finals won by W. E. Merrill and C. E. Woodruffe, and J. A. Root and D. E. Woodruffe. The winners in these matches will then compete in the finals.

FROM INVITATIONS.

The Junior Prom Invitations are now ready and will be distributed in the Union today and tomorrow, from 1 to 2 o'clock, by members of the committee. Those who have already been invited will be sent a card, and those who have not are on the waiting list, and are entitled to an invitation. A deposit will not have to be made.

WORK IN TESTING LABORATORIES.

Professor Haywood Starts Series of Materials Tests.

Professor Harrison W. Haywood, of the Mechanical Engineering Department, is now having a series of pictures taken of the work in the testing laboratories of the Institute. To date, only six have been taken out, but the time of the year is over there will probably be about twenty. These are to include a report of special tests being carried on by this year's students. The work in the laboratory at present is being done by the Course 1 men, and consists of strength tests of various building materials. Eight pictures will be taken in this part of the work in order to have an exact record of the methods and in those laboratories, rather than to show their equipment. The four already finished include pictures of a compression test on a bar, a tension test, a Tension test, and a bending test on a beam. All the pictures will be taken in the laboratories.

Although many pictures have been previously taken, they are primarily for advertising purposes, while this series is for the reference of the engineering departments of Technology in general, for the use of the Civil Engineering Department by the end of the course, and for the use of the Course in the preparation of the laboratory work at the Institute.

THE WEATHER.

The weather this week has been very favorable. The temperatures have been quite high, the wind from the south, and the weather has been generally pleasant. The temperatures have been quite cool, and the weather has been generally pleasant. The temperatures have been quite high, and the weather has been generally pleasant.
