PROF. LINDGREN SPEAKS AT MINERS' MEETING

A meeting of the Mining Engineers was held in 12 Regent Avenue, Boston, on the evening of June 11. Prof. A. C. Lindgren, the head of the Department of Geology at the Massachusetts Institute of Technology, was the speaker, as well as the Chairman of the meeting. He talked on the "Mining Interests of the United States." He pointed out that the greatest mining interests of the United States were in the west, and that the mining industry was of great importance to the country.

The meeting was well attended, and Prof. Lindgren was warmly praised by the members for his clear and concise statements. He was particularly interested in the development of the mining industry in the western United States, and he encouraged the students to take an active part in its progress.

During the meeting, the A. B. C. Mining Club of Boston was organized, and Prof. Lindgren was elected as one of its members. The club's purpose was to promote the development of the mining industry in the country, and to encourage the students to take an active part in its progress.

FRESHMAN BASEBALL TEAM FAST DEVELOPING

The Freshmen baseball team has been rapidly improving into a first-class team. The team is made up of several good players, and they are working hard to make the team a success.

The Freshmen baseball team has been playing well in recent games, and they are expected to make a good showing in the coming season. The team is under the guidance of Mr. Van der Pyl, who is an experienced baseball player.

The Freshmen baseball team has been receiving much attention from the students, and they are looking forward to the team's success.

PITCURE OF HALLEY'S COMET EXHIBITED

An interesting astronomical photograph of Halley's comet was recently exhibited in the entrance hall of Rogers Hall. The photograph was taken at the Lowell Observatory, Flagstaff, Arizona, under the direction of Dr. Percival Lowell, non-resident astronomer.

The comet, which appears only once every twenty years, was shown during the month of May, 1910, and attracted considerable attention. It is through the kindness of Professor Lowell that the Tech students were able to see the comet when it was at its brightest.

Another interesting detail shown in the photograph is that the comet was captured just as it darted across the field of a small telescope, which was going on at that time.
