The TECH. BOSTON. MAR. APRIL 21, 1913

M. I. T. BOAT CLUB DUES ARE REQUESTED

All Members Are Asked to Pay at Once—Practice Held All Junior Week.

During the past week the Crew have been out every day practicing, and they are reported to be getting into fine shape. Saturday morning a number of new candidates reported, some of whom are said to show considerable form. There are several races with local crews being advertised, and an account of several minor details the dates are not yet determined upon.

There are still a great many fellows who signed their intention of joining the Boat Club who have not yet paid their dues. These men are asked to see R. C. Gove, or if possible, as soon as possible, so that the money can be used to help cover some of the recent necessary expenditures.

Practice will be held every afternoon next week, at 4:15, and all candidates are urged to report regularly. Already this year a little amount of fine material has come out, and if these men will continue to show up every day the Crew management promises to turn out a Crew of which we may well be proud.

COMMUNICATION.

To the Student "Activists".

I have established for the Institute a lithograph plant which can turn out very high grade work at prices very much lower than any commercial house will do them. As an advertisement to the various activities desiring to advertise by posters, as well as for the purpose of giving the young man in charge of the work practice in various kinds of work, I will, for the present, print posters in small lots at very low prices.

We have had little experience as to actual cost that I can give only an approximation of what the actual charge will be, but in the beginning will work at a very low schedule which will be subject to change later on as dictated by experience.

We can reproduce any poster of which the original is drawn on tracing paper or cloth, in black, using only single lines, that is, shading must be done in line or stipple as the process will not reproduce variations of weight in solid tints except from regular half-tone negatives, which would add greatly to the expense. To get good results, drawing should be made with "Process black," and it is in this method of work that we have had the greatest success.

The present limit of size of plate is 14x20 inches, but this is the limit of size of plate and the paper is 17x22 inches. Larger size can be estimated about a dollar more if the paper is 17x22 inches. Larger size will cost a dollar more if bond paper will cost a dollar more if the plate is 17x22 inches. Larger size will cost a dollar more if paper and fancy coated papers will cost somewhat more, depending on the weight used, as prices quoted are as nearly as can be estimated about cost. Most papers suitable for the process would not very materially increase the cost.

These prices are minimum and tentative, at reasonable prices, and every courtesy and every assistance is extended to the actual charge will be eventually, but in the beginning will work at a very low schedule which will be subject to change later on as dictated by experience.
