President Richard C. Maclaurin has announced the establishment of a course that will be unique in educational institutions, one in industrial physics. This is the outcome of the need for men trained in physics for the solution of problems that present themselves in the industrial world.

The new course is the outcome of a real need that has been pointed out by President Maclaurin to several of the leading colleges and universities, and the direct relations of which to their specialties are not always obvious. And when one is struck over the chemical problems of the day it is evident that many of them are really in the field of physics.

In establishing the course the Institute is following in so many other lines of technological education. It was the first school in the country to establish a course in physics at all and it is the first course leading to a degree in this subject. The course is one that was comparable in extent and thoroughness to the courses leading to engineering degrees or other professional degrees. In 1882, the Institute established its department of Electrical Engineering, an outgrowth of the department of physics, and in 1891, the parent department, anticipating the demand for men specially trained in the line of physics, electric engineering and electrochemistry, established the first course in the country leading to a degree in electrochemistry.

A good race may be expected in the half-mile. Hurdler, running against Germain and Schuyler, will run for the first time. Records may be given.

The B.A. A. is in the field again, and the hurdles. In the track, High will probably be the only entry, while in the others the whole team from Lewiston, on Canaan, will battle with the exception of the high jump, in which Davis is likely to have his own way, to the hurdles Tech will have Warner, Moos and Ryan, who will run for Tech, while the B.A. A. will have Warner, Moos and Ryan. Hurdle will start in both the miles and two-mile, but the main thrust of the club is placed in Powers, who will take first place in the races. Both teams are low in number of athletes, Tech having but a few.

In the second mile there will be a good race, with the men of the track team leading. Besides Head, the B.A. A. will have Baltaday, Bland and Cool, and will run for Tech, while the B.A. A. will have Warner, Moos and Ryan.

The 1914, was chosen to be leader of the Banjo Club, with Duryea, 1916, as assistant manager; A. C. Sherman was re-elected leader of the Banjo Club, with R. W. Moorehouse manager; Tallman, 1914, was chosen to be leader of the Glee Club, with Dalton as assistant manager. It was voted that the representative of the Music Committee should be chosen by the Executive Committee. The banquet closed with the singing of the "Stein Song," followed by a "roaring "We Are Happy.""
