NEW DROP-HAMMER

New Machine Installed in Shops for Drop-Forging.

The big drop-hammer lately installed in the mechanical laboratories for demonstrating the process of drop-forging was put into service for the first time yesterday. Mr. Brown, an instructor in the department, gave a comprehensive talk on the applications of this kind of forging in modern industry. He said in part, that the great advantage of the machine lies in its ability to duplicate work with great accuracy, and in its power to increase the output of a plant.

SCHOLARSHIPS ARE ON THE INCREASE

(Continued from Page 3.)

... to students who have a poor record, but not against awards being made to students who may not be considered in severe need.

The amounts awarded from Institute funds (not including the Rogers fund) have increased from $20,437 in 1907-08 to $23,255 in 1912-13. Thirteen percent of the scholarships last year were granted to freshmen. It has occasionally been questioned whether it is prudent to give such aid to first-year students. As throwing light on this question the committee says that there is some risk in selecting students early in their course, but examination of the records shows that the judgment of the Committee, on the whole, has not been misplaced. Of the 17 freshmen in the class of 1911 who received some aid in the year 1907-08, all but one graduated. As evidence of the efforts of the committee to maintain a high standard of scholarship as a condition of receiving a grant, 12 of the awards for the second term were made subject to good records to be secured during the first term. Eleven of these students fulfilled the conditions.

The committee was obliged to refuse 39 applications, divided by class as follows: Seniors 15, Juniors 15, Sophomores 8, and Freshmen 1. During the past year seven full grants and two half-grants were made to students resident in Cambridge, and it is understood that a number of Cambridge students will hereafter be selected for scholarship aid.
