MUSICAL CLUBS' DINNER POSTPONED

Will Be Held Next Wednesday—G. R. Duryea Elected Secretary.

At a meeting of the executive committee of the M. L. T. Musical Club yesterday, it was decided to hold the annual dinner next Wednesday, May 13th, at 6:30. This stop was made to make possible the attendance of many men who could not have come.

The plant of the Walker Pratt Machine and Architectural Engineering Societies will be present and the joint committee of the Architectural and Architectural Engineering Societies feel that the affair will thus be made better than ever before.

Officers for Ensuing Year To Be Elected.

A special meeting of the Radio Society will take place tomorrow, in the evening, at 8:45 p.m. The meeting is called for the purpose of nominating and electing the following officers: President, Vice-President, Secretary, Treasurer, and Board of Directors. Written ballots will be held, and it is desired that all members attend.

The regular annual inspection of the Societies must have their ballots in hand at 6 o'clock, the evening of the 13th, at 6:30. Positively no one who is absent from this meeting without good excuse will be allowed to attend the banquet.

The whole process of auto manufacturing was made very realistic. The testing of springs and shafts was done to very good advantage. Ideal tests were made by dragging a steel ball on the metals and noting the height to which it bounced. There were several views of the chemical laboratory where the steel is tested for sulphur, phosphorus carbon and other constituents. The boring of the cylinders with multiple drills, crank-casting, milling, and the balancing and weighing of the moving parts were illustrated, and assemblies of the various parts of the auto such as transmission, motor, frame and body were shown separately. There were also many views of general interest to engineers, among which were some of dropping and cold pressing.

Perhaps the most interesting films shown were those depicting the testing of the finished cars. The cars were shown bumping over the test road at the plant, and the men in the audience showed no desire to be in the position of the driver. However, every appearance on the screen of the "little lady," who was trying to induce papa to spell a perfectly good shelf in favor of the Maxwell Company brought a round of applause, and at the close when her success was assured, the audience was completely satisfied.

The thirty-second annual architectural dinner will be held at 6:30 p.m. Monday, May 4th, at the Copley Square Hotel. A number of the Alumni of the Technology Architectural department will be present and the joint committee of the Architectural and Architectural Engineering Societies feel that the affair will thus be made better than ever before.

Officers for ensuing year to be elected.
